# ***SERVICE* GUIDE**

For the latest parts information,  
please access to our service web site  
(<http://www.e4buyer.com/refrigerator>)

**SIDE-BY-SIDE REFRIGERATOR**

**Model:**  
**RS21\*\***  
**RS23\*\***

## **WARNING**

### **IMPORTANT SAFETY NOTICE**

The service guide is for service men with adequate backgrounds of electrical, electronic, and mechanical experience. Any attempt to repair a major appliance may result in personal injury and property damage. The manufacturer or dealer cannot be responsible for the interpretation of this information.

## 1. SAFETY WARNINGS

- Pull the power plug out already for the change or repair of electric parts.  
→ Be careful the electric shock.
- When exchanging the parts, use the correct parts.  
→ Check the model name, rating voltage, rating current, running temperature symbols.
- When troubleshooting, connect firmly the types of harness.  
→ Make not to be separated when some power is imposed.
- Check the traces of water infiltration at the electric parts.  
→ If there is a trace of water infiltration, exchange or tape the parts.
- Check the assemble status of parts after troubleshooting.  
→ It should be done indiscriminately as before the repair.
- Check the use circumstance of refrigerator.  
→ If the refrigerator is installed at the place that is damp or wet, or status of installation is unstable, change the installation place.
- Do earth in case of need.  
→ Particularly, Be sure to earth when there is a risk of an electric leakage by humidity or wetness.
- Do not use multi plugs in a plug socket at the same time.  
Check the power cord and socket is damaged, pressed, squeezed, or fired.  
→ If the plug or plug socket is damaged, repair or exchange that immediately.
- Do not store the foods unstable or bottles in the freezing room.
- Do not repair the refrigerator by user himself.
- Do not store another materials except the foods.  
→ Drugs or scientific materials : difficult to keep a precise temperature.  
→ The inflammables(alcohol, benzene, ether, LP gas, butane gas etc.): have a risk of explosion.

# 1. SAFETY WARNINGS

**Read all instructions before repairing the product and keep to the instructions in order to prevent danger or property damage.**

## CAUTION/WARNING SYMBOLS DISPLAYED

	<b>Warning</b> <i>Indicates that a danger of death or serious injury exists.</i>
	<b>Caution</b> <i>Indicates that a risk of personal injury or material damage exists.</i>

## SYMBOLS

	means "Prohibition".
	means "Do not disassemble".
	means "No contact".
	means "The things to be followed".
	means "Power cord should be unplugged from the consent".
	means "Earth to prevent Electric shock".

## Warning & Caution

**Pull the power plug out to exchange the interior lamp of the refrigerator.**

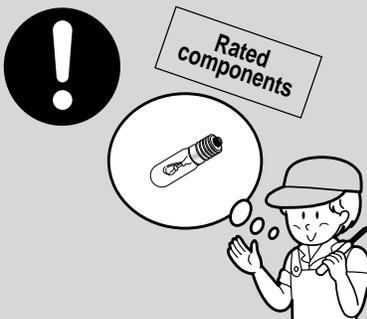

- It may cause electric shock.

**Unplug**

**Use the rated components on the replacement.**

- Check the correct model, rated voltage, rated current, operating temperature and so on.

**On repair, make sure that the wires such as harness are bundled tightly.**

- Bundle tightly wires in order not to be detached by the external force and then not to be wetted.

**On repair, remove completely dust or other things of housing parts, harness parts, and check parts.**

- Cleaning may prevent the possible fire by tracking or short.

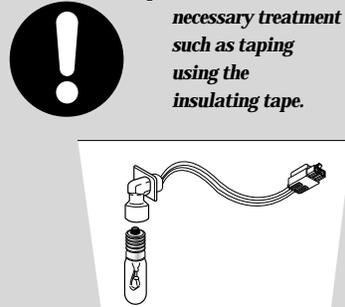

**After repair, check the assembled state of components.**

- It must be in the same assembled state when compared with the state before disassembly.

**Check if there is any trace indicating the permeation of water.**

- If there is that kind of trace, change the related components or do the necessary treatment such as taping using the insulating tape.

# 1. SAFETY WARNINGS

\* Please let users know following warnings & cautions in detail.

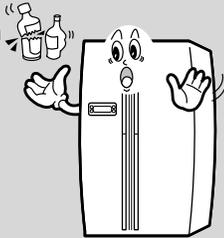

## Warning & Caution

Do not allow users to put bottles or kinds of glass in the freezer.

- Freezing of the contents may inflict a wound.

Prohibition

Do not allow users to store narrow and lengthy bottles or foods in a small multi-purpose room.

- It may hurt you when refrigerator door is opened and closed resulting in falling stuff down.

Prohibition

Do not allow users to store pharmaceutical products, scientific materials, etc., in the refrigerator.

- The products which temperature control should not be stored in the refrigerator.

Prohibition

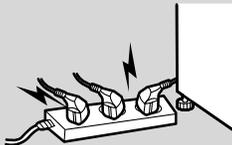

Do not allow users to insert the power plugs for many products at the same time.

- May cause abnormal generation of heat or fire.

Prohibition

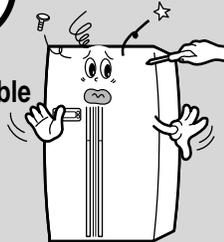

Do not allow users to disassemble, repair or alter.

- It may cause fire or abnormal operation which leads to injury.

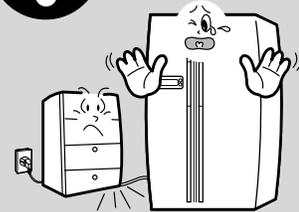

Do not disassemble

Do not allow users to bend the power cord with excessive force or do not have the power cord pressed by heavy article.

- May cause fire.

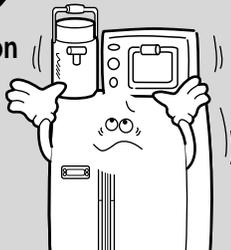

Do not allow users to store articles on the product.

- Opening or closing the door may cause things to fall down, with may inflict a wound.

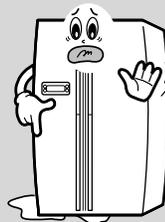

Prohibition

Do not allow users to install the refrigerator in the wet place or the place which water splashes.

- Deterioration of insulation of electric parts may cause electric shock or fire.

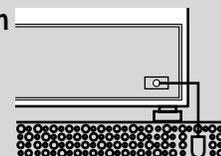

Make sure of the earth.

- If earthing is not done, it will cause breakdown and electric shock.

Earth

## 2. INSTRUCTION

- **SAMSUNG side by side refrigerator has the following characteristics.**

### **Twin Cooling System**

- The refrigerator and the freezer have two evaporators. Given this independent system, the freezer and the refrigerator are cooled individually as required and are, therefore, more efficient. Food odor from the refrigerator does not affect food in the freezer due to separate of air flow circulation.

### **Multi-Flow System**

- Cool air circulates through multiple vents on every shelf level. This provides even distribution of cooling inside cabinets to keep your food fresh longer.

### **Door Alarm**

- A beeper reminds you if the door is left open.

### **High humidity for fresher food**

- You can keep food, fruit and vegetables fresh for longer because your refrigerator supplies highly humidified cold air. This can be up to four or five times more effective than a normal refrigerator.

### **Energy-saving fridge/freezer**

- Power consumption is kept to a minimum by distributing cool air separately to the refrigerator and freezer.

### **Faster cooling times**

- The power freeze function allow you to freeze food more quickly.

### **Abundant supply of ice and cold water**

- The ice and water dispenser provides ice and cold water at any time.

### **Beverage Station (optional)**

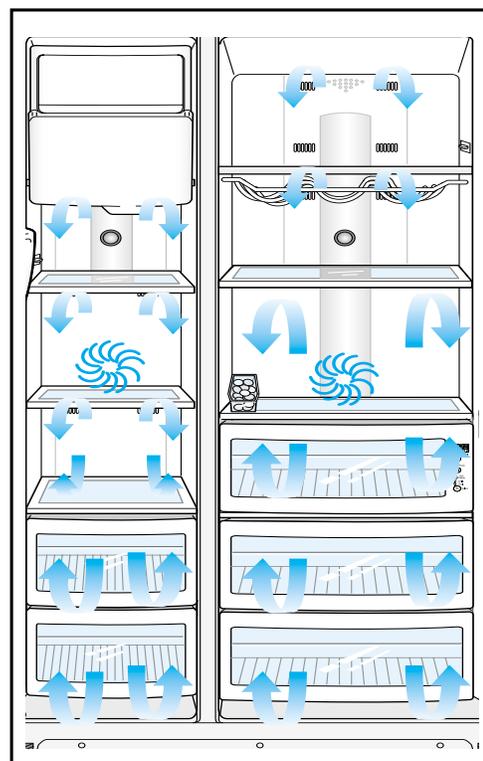

- You do not have to open the main door to access frequently used food in the extra refrigerating compartment. This saves time and money.

### **Deodorizer (optional)**

- Reusable deodorizer keeps the refrigerator air fresh and odor free.

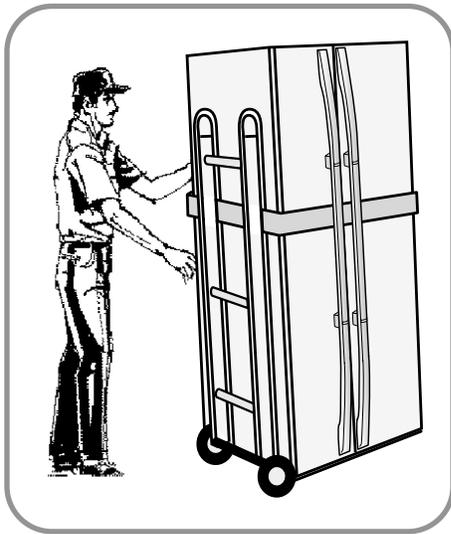

### **CoolSelect Zone™Drawer (optional)**

- User can select Quick Cool, Thaw and Select buttons for quickly chill, thaw and cools items. Select Soft Freeze, Cool or Chill to control the temperature of drawer.

This operation instruction covers various models.  
The characteristics of your appliance may differ slightly from those described in this manual.

### 3. INSTALLATION

#### 1) To protect refrigerator in movement

Use padded hand truck as shown. If entrance width is less than 30", remove doors prior to installation and reattach doors according to procedure below.

#### 2) Remove all protective tape and pad in refrigerators.

Please adjust the clearance between the doors.

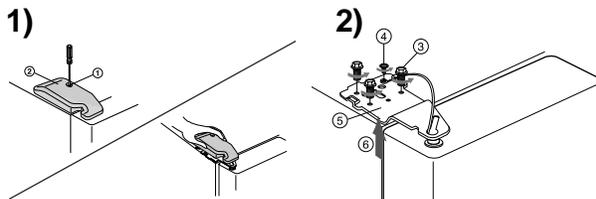

#### 3) Set the temperature control to the temperature and wait for an hour.

The refrigerator should get slightly chilled and the motor runs smoothly.

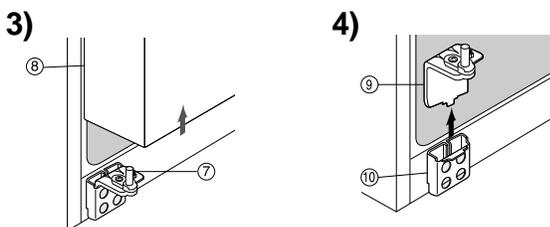

#### 4) Once the refrigerator temperature is sufficiently cool

You can store food in the refrigerator. After starting the refrigerator, it takes a few hours to reach the appropriate temperature.

#### • Disassemble the refrigerator

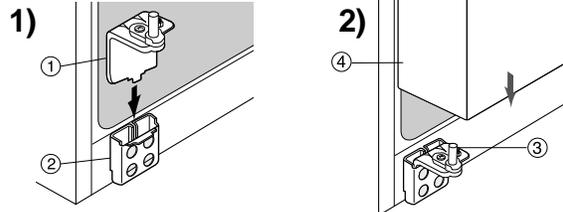

- 1) With the door closed, disassemble screw (1) by using (+) screw driver and then disassemble the upper hinge cover (2).
- 2) Disassemble bolts (3) and screws (4) to the counter-clockwise by using a tool, and take off the upper hinge (5) along the arrow (6). Take care when you disassemble the door to ensure that it does not fall on you.

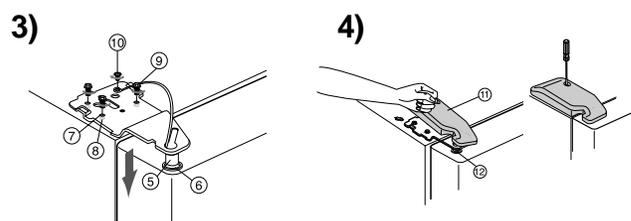

- 3) Disassemble the door from the lower hinge (7) by lifting the door (8).
- 4) Disassemble the lower hinge (9) from the bracket lower hinge (10) by lifting the lower hinge (9) in the direction of the arrow.

#### • Assemble the refrigerator

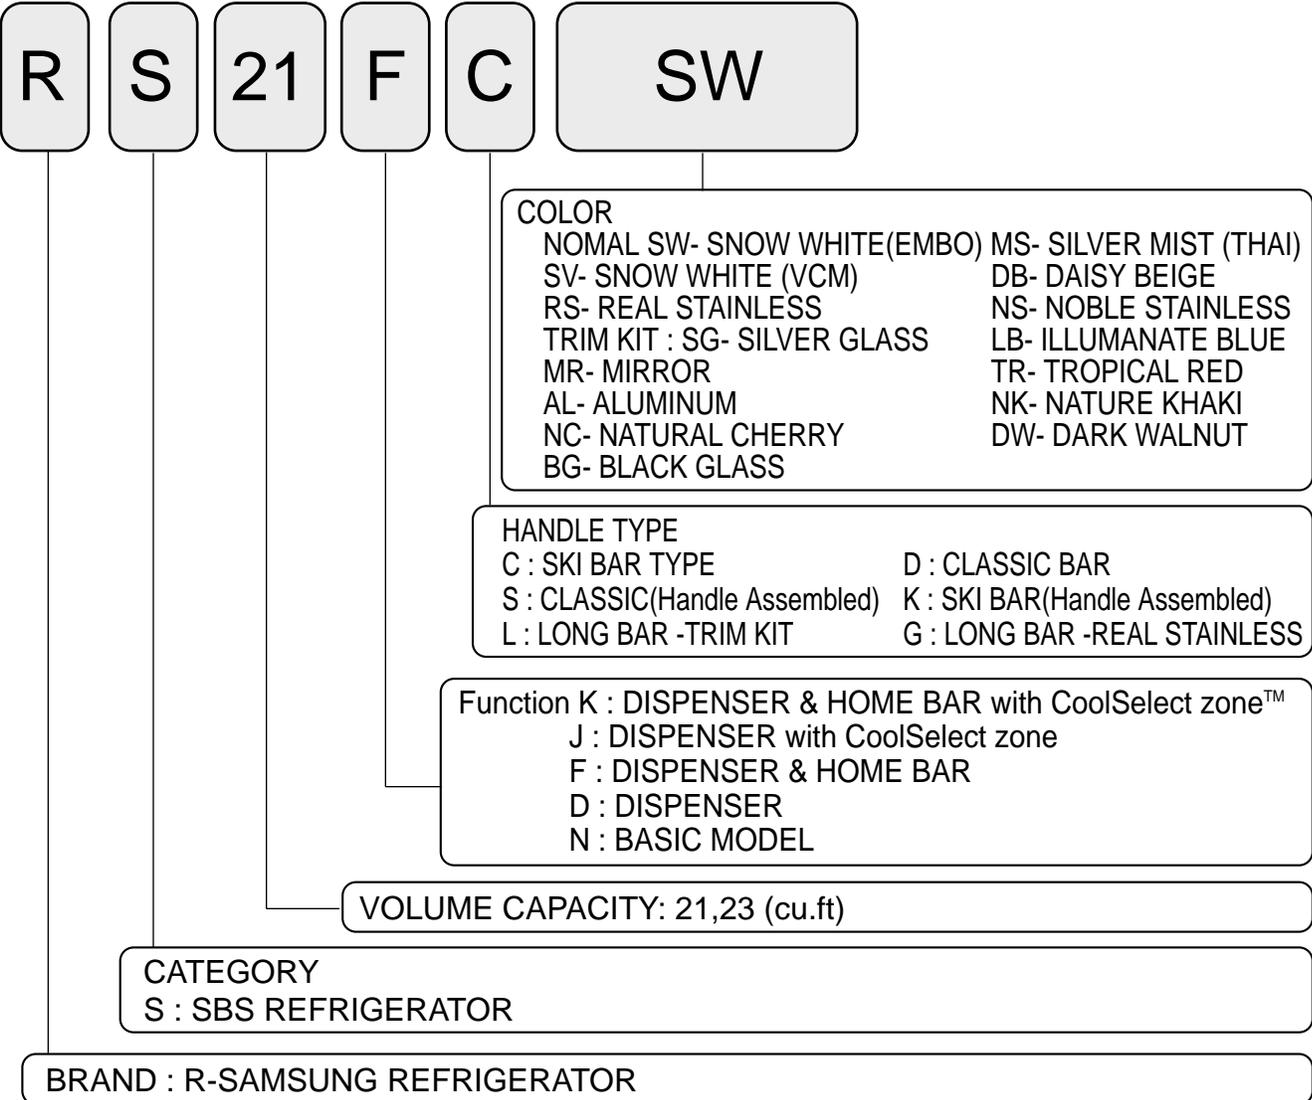

- 1) Insert the lower hinge (1) in the bracket lower hinge (2).
- 2) Assemble the door (4) in the lower hinge (3).

- 3) Insert the upper hinge shaft (5) into the hole (6). After leveling between the upper hinge hole (7) and the hole of the refrigerator (8), assemble bolts (9) and screws (10) to the clockwise by using a tool.
- 4) Put the front part of the upper hinge cover (11) on the front part of the upper hinge (12) and assemble, starting with the front part of the upper hinge cover. Assemble the screw to the clock wise by using a tool.

## 6-5. Dimensions of Unit

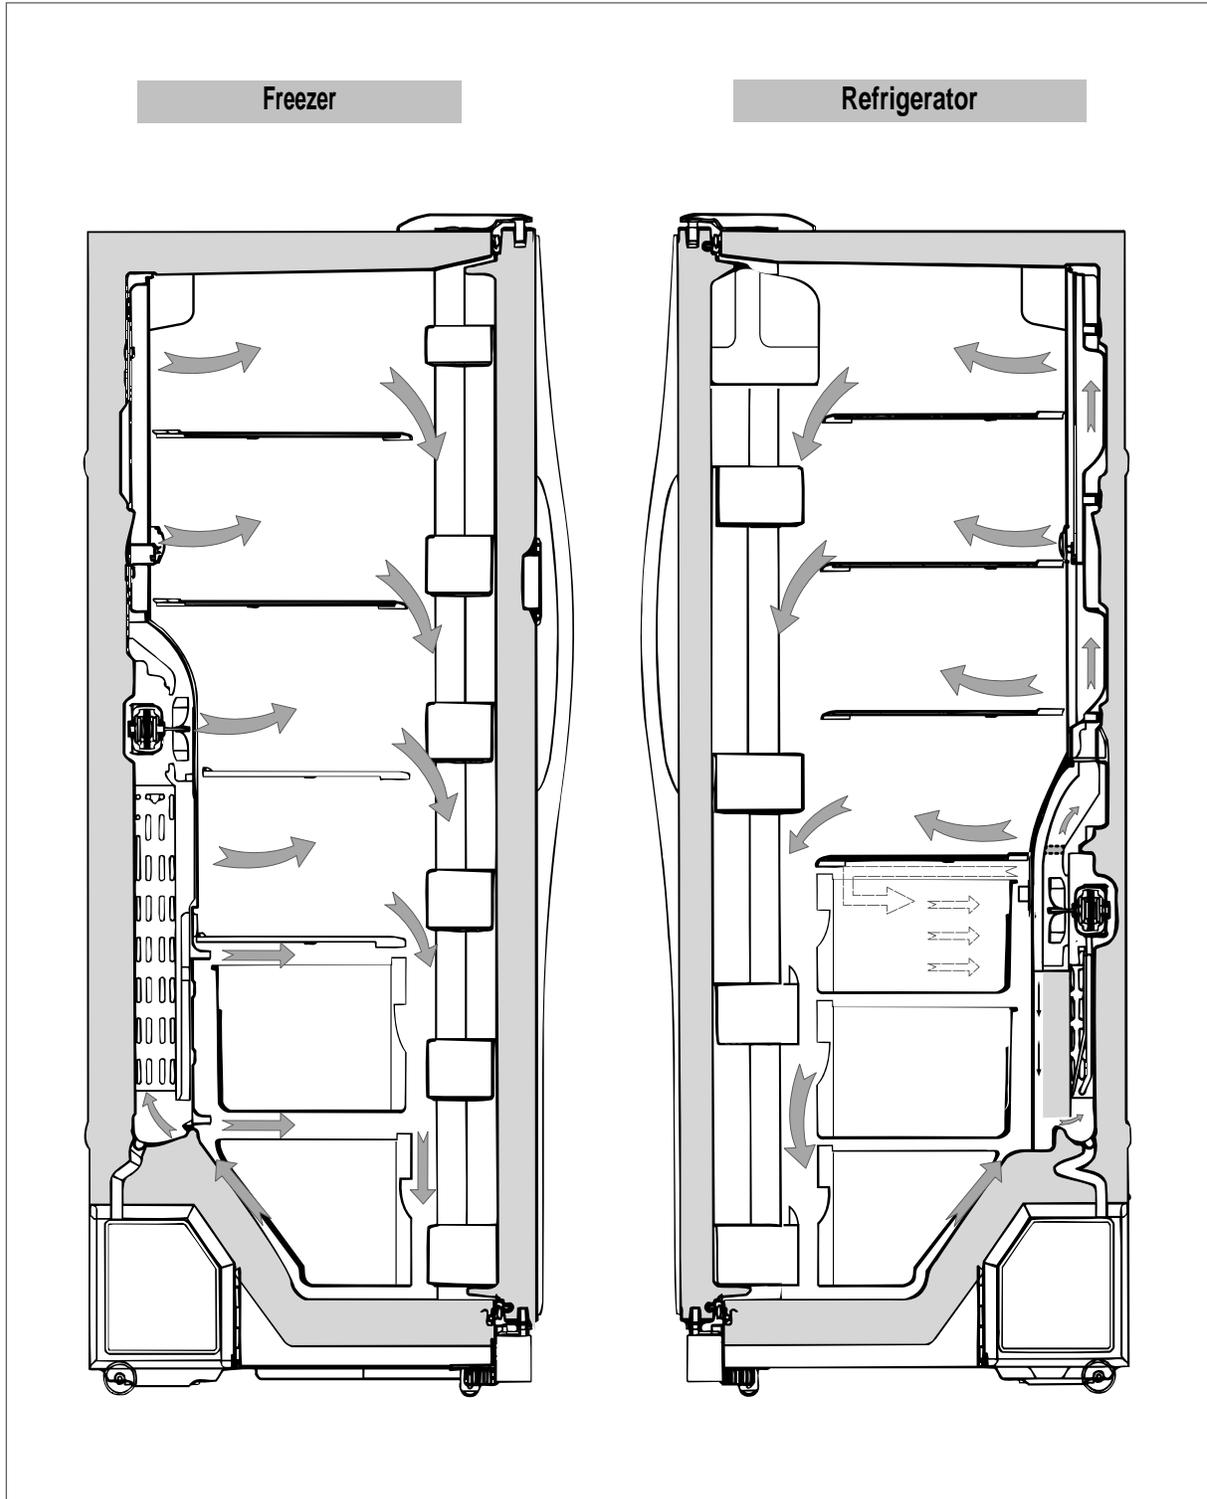

## 7. FREEZING CYCLE AND COOL AIR CIRCULATION ROUTE

### 7-1. Freezing Cycle

Compressor → Sub-condenser → Side Cluster Pipe(FRE) → Side Cluster Pipe(REF) → Hot Pipe → Dryer → Capillary Tube → Refrigerator Evaporator → Freezer Evaporator → Suction Pipe → Compressor

## 7-2. Cooling Air Circulation

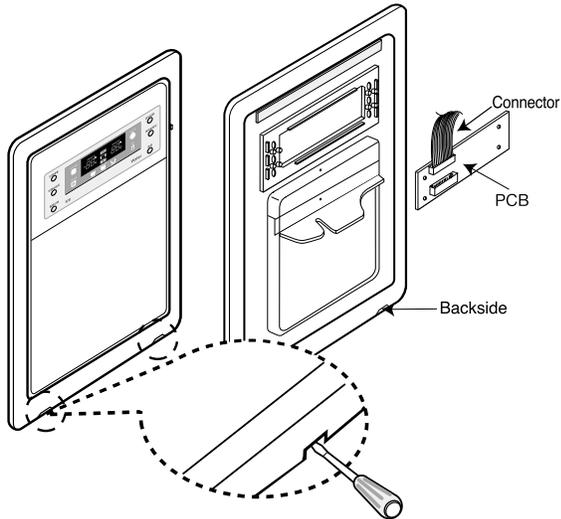

## 8. MECHANICAL DISASSEMBLY

### 8-1. Freezer Disassembly

#### Control Panel

1. Insert a flat-blade screwdriver on the slot as shown and unlock the tabs.
2. Disconnect the wire connector in the back of control panel

#### Door Gasket

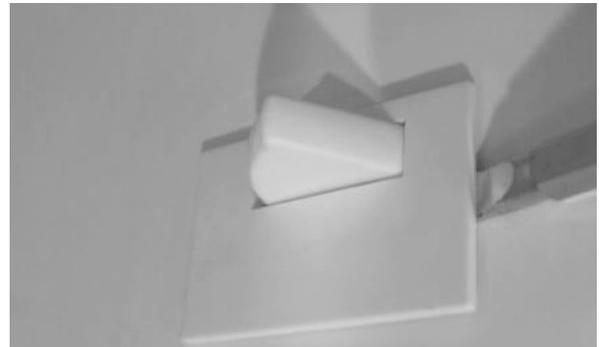

- The door gasket is set into groove on door liner
1. Open the door.
  2. Grasp the gasket and pull it out from the door liner.

#### Light SWITCHES

The unit have two light switches on the side wall of freezer & refrigerator.

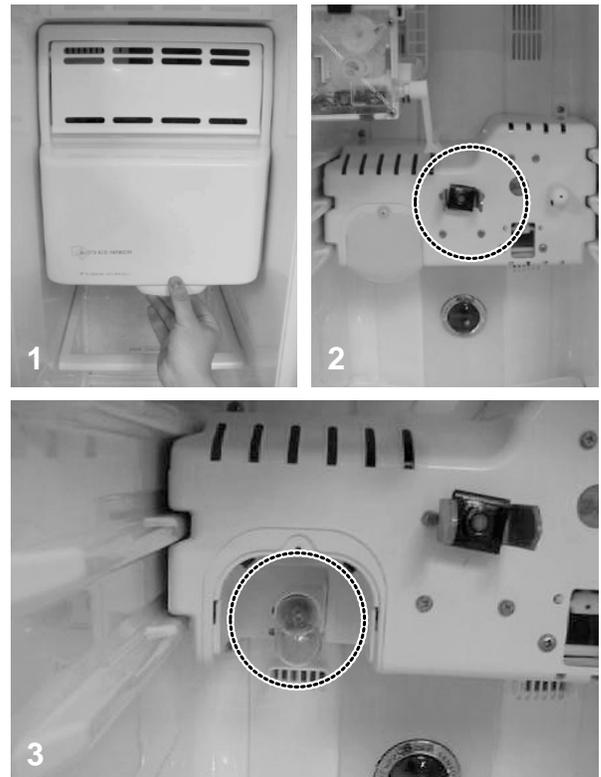

1. Use a small flat-blade screw driver to unlock the hook and pull the switch out until the wire connector is exposed.

#### Lights (Dispenser MODEL)

The light of freezer is located at lower side of Auger motor case.

1. Remove ice bucket.
2. Remove the lamp cover by releasing the screw.
3. Change the bulb (rated component)

### Lights (Basic MODEL)

Refer to Refrigerator Disassembly  
Disassemble/assemble method is  
same as the light in refrigerator

### Door Guard in FREEZER

Lift the guard up and pull it out from door liner

### Shelves

1. Pull the shelf out as far as it goes.
2. Lift it up and pull it out from the unit.

### Drawers in FREEZER

The drawers are located at bottom side of  
freezer.

1. Pull the drawer out as far as it goes.
2. Lift it up slightly and pull it out from the unit.

### Ice Bucket

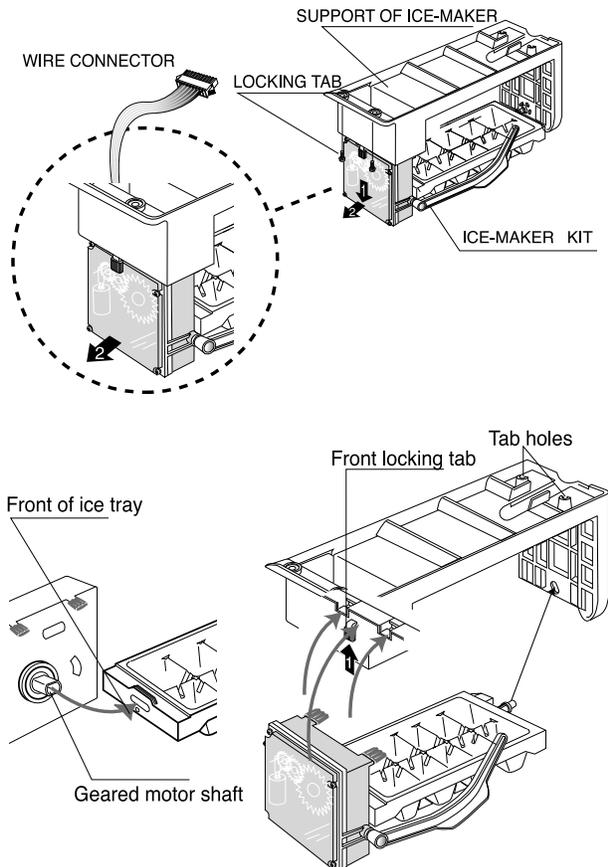

The ice Bucket is located in the upper portion of  
the freezer. this assembly stores ice made by the  
ice maker and dispenses ice cubes.

1. Lift the ice bucket up
2. Slide it out from the unit.

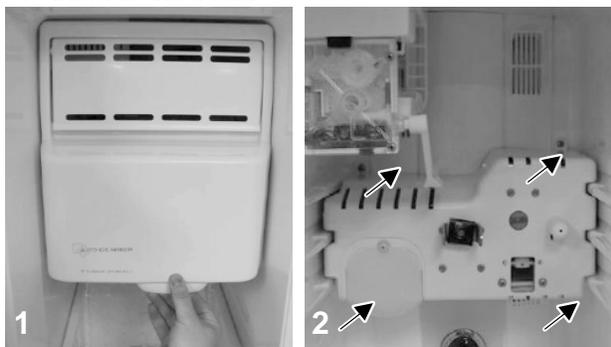

## Ice Maker

1. Pull the shelf out as far as it goes.
2. Lift it up and pull it out from the unit.

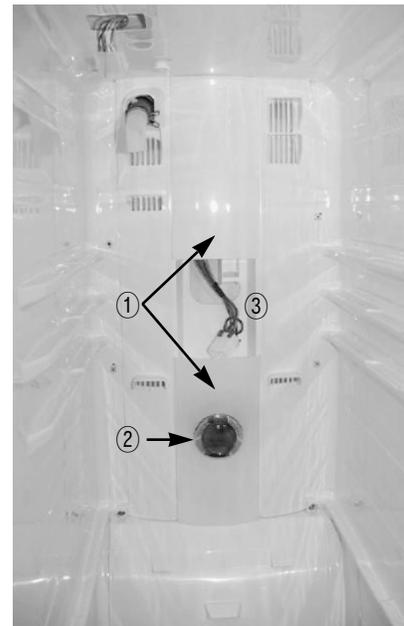

## Auger Motor & case

1. Remove ice bucket.
2. Remove the screws(4) that secured the case
3. Slide it out from the unit. then, you can disassemble the auger motor from the back of the case.

## Cover Multi Freezer Assembly

1. Remove ice bucket and the Ice maker.
2. Remove the covers(①) and sensor covers(②)
3. Remove the screws(3pcs) that secured the assembly.
4. Disconnect the wire connector(③) and the connector for Sensor (it can be possible to disconnect this connector after removing the sensor cover)

## Cover Evaporator Assembly

1. Remove the assembly of cover multi freezer
2. Pull the assembly out toward front by holding upper side of the assembly up to see the connector.
3. Disconnect the wire connector and take the assembly out.

### Evaporator Fan motor

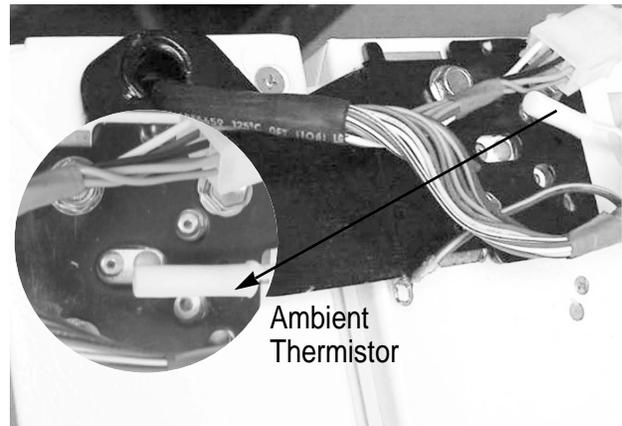

Evaporator Fan Motor is located in the back side of the cover evaporator assembly.

1. Remove the screws(4pcs) that secured the Fan motor assembly on the 4 corner.
2. Remove the motor case by removing another screw and take out the motor.

### Ambient Thermistor

The thermistor is located at inside the upper hinge cover it sends temperature signal to the micro-processor.

### Evaporator

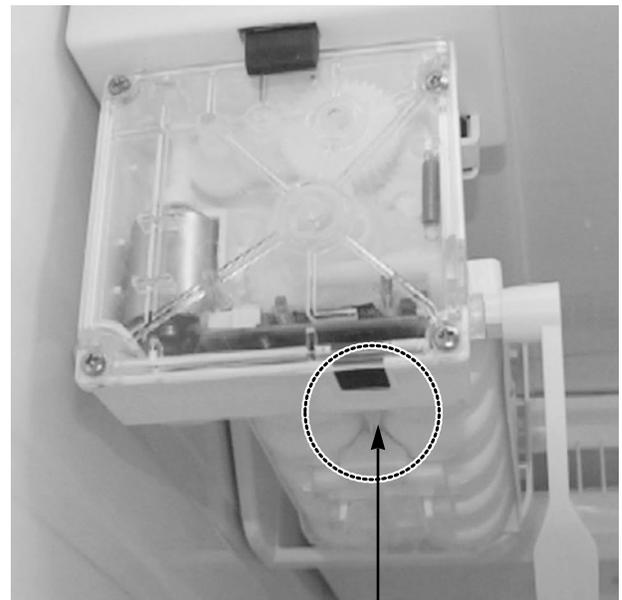

Evaporator is located in the bottom of freezer to produce cold air driven across evaporator coils.

1. Remove ice bucket and the Ice maker.
2. Remove the cover multi freezer assembly.
3. Remove the cover evaporator assembly.
4. Disconnect the wire connectors.
5. Desolder the inlet and outlet tubes.
6. Take the steps in opposite to seal the system as mentioned above.

### Ice Maker Thermistor

Ice Maker Thermistor is located bottom of ice tray. it sends temperature signal to the micro processor.

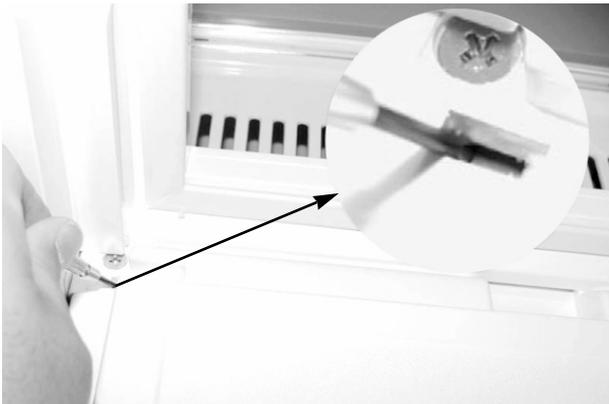

Thermistor(Ice-Maker)

## 8-2. Refrigerator Disassembly

### Beverage Station

The beverage station allows access to the refrigerator with out opening the refrigerator door.

1. Open the door beverage station.
2. With a small flat-blade screwdriver, take out the rubber cap, then put it into the small hole and push the button inside.
3. Take off the door.

### Door Gasket

The door gasket is set into groove on door liner

1. Open the door.
2. Grasp the gasket and pull it out from the door liner.

### Drawers in Refrigerator

The drawers are located at bottom side of refrigerator.

1. Pull the drawer out as far as it goes.
2. Lift it up slightly and pull it out from the unit.

### Lights

The light of refrigerator are located inside of cover multi ref. assembly.

1. Remove the lamp cover by releasing the screw.
2. Change the bulb (rated component)

### Door Guard in REFRIGERATOR

Lift the guard up and pull it out from door liner

### Shelves

1. Pull the shelf out as far as it goes.
2. Lift it up and pull it out from the unit.

### Water filter

The water filter is located in the upper left hand corner of the refrigerator. this filter filters water for ice maker & water dispenser.

1. Turn the water filter 1/2 turn counterclockwise and pull it down.
2. To install the filter align the indication mark(unlock position) and push it up while turning 1/2 turn clockwise up to the lock position is aligned. Do not over tighten.

### CoolSelect zone™(Optional)

1. Remove all shelves.
2. Remove two screws that secured.

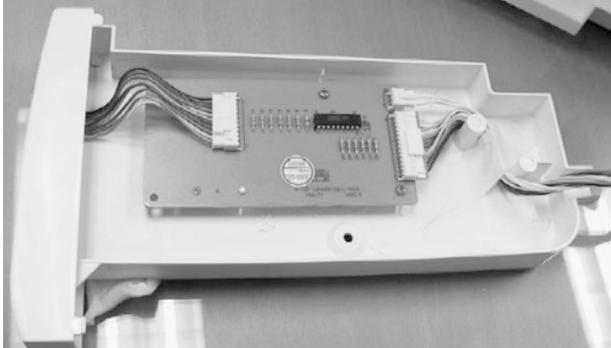

3. Disconnect the wire connector.

4. Remove the screw for disassembling the PBA board for controlling CoolSelect zone™

5. Disassemble the PBA board.

2. Remove the screw and disconnect the wire connector, then pull it out.

### Cover Multi REF.

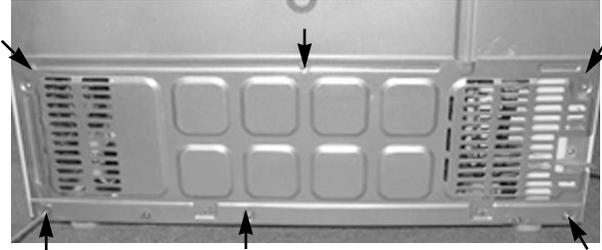

1. Remove the screw and cover lamp. then, remove the sensor cover.

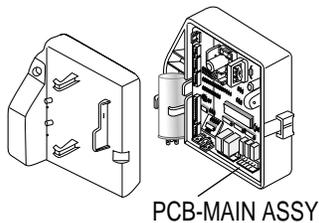

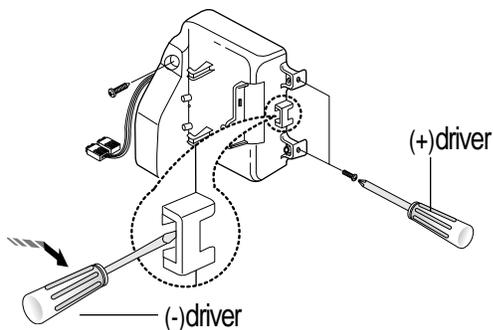

## 8-3. Machine compartment

### Machine Compartment & Electric Box

- 1) Disconnect the compressor cover by releasing the screws(6EA).

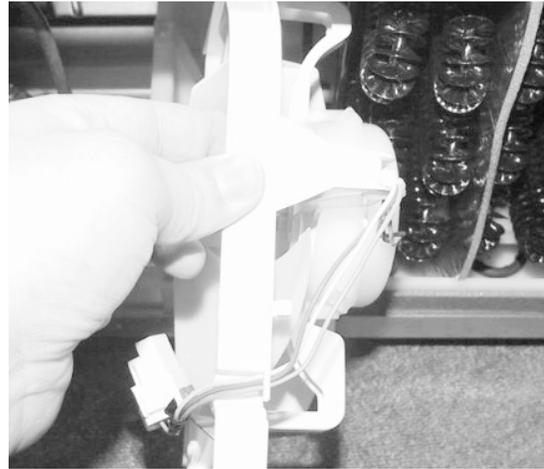

- 2) Remove the screws which are securing the electric box. and press the tap in electric box cover to take out by using a flat-blade screw driver.

### Condenser Fan

The condenser fan is located in the middle of machine compartment it cools down the sub-condenser and compressor.

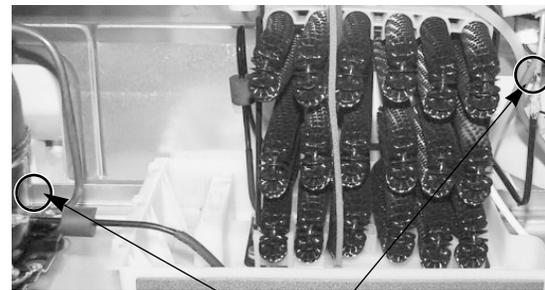

- 1) Disconnect the wire connector of Fan.
- 2) Remove the screws (1 EA) on the drain water tray.
- 3) Take out the condenser fan assembly.

### Sub-condenser

The sub-condenser is located in the machine compartment.

- 1) Desolder the compressor discharge & the outlet of sub-condenser.
- 2) Take out the sub condenser.

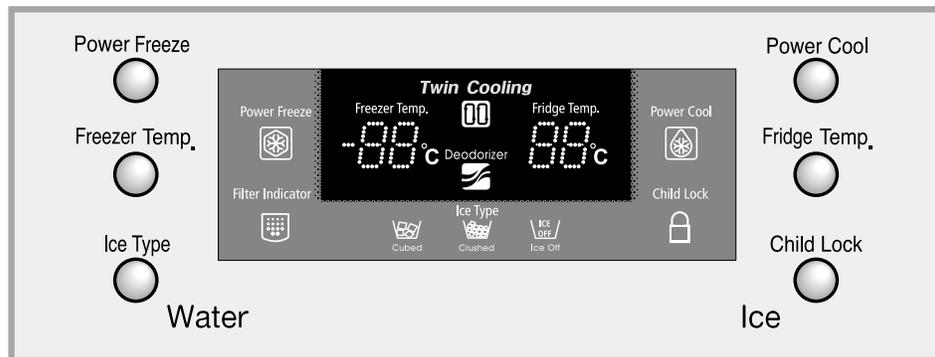

Desoldering Point

## 9. Operation Function

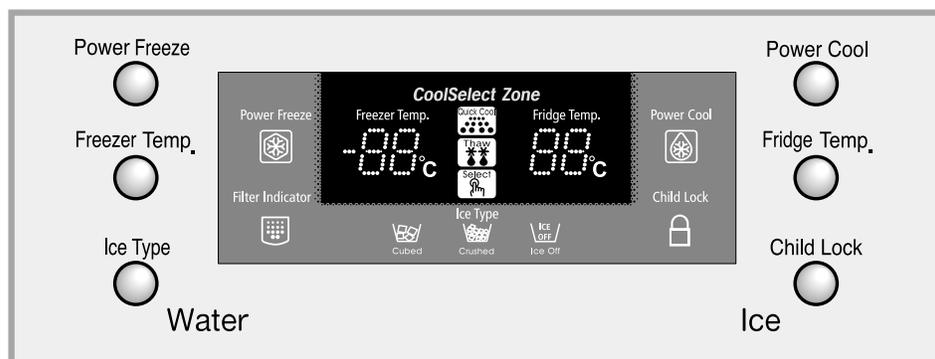

9-1) Digital Panel . . . . .	30
9-2) Temperature Control Function . . . . .	30
9-3) Power Freeze and Power Cool Functions . . . . .	31
9-4) Child Lock Function . . . . .	31
9-5) Ice & Water Dispenser Function . . . . .	32
9-6) C-Fan Motor Delay Function of the Machine Compartment . . . . .	32
9-7) CoolSelect Zone™ Function . . . . .	32
9-8) Water Filter Indicator Function . . . . .	33
9-9) Ice-Maker Function . . . . .	33
9-10) Defrost Function . . . . .	35
9-11) Forced Operation Function (Pull-down/R-Defrost/R,F-Defrost/Cancellation) . . . . .	36
9-12) Sound Function . . . . .	37
9-13) Exhibition Function . . . . .	37
9-14) Self-Diagnostics Function . . . . .	37
9-15) Load Operation Check Function . . . . .	37
9-16) Restoration Function for Power Outage . . . . .	37
9-17) Set Point Shift Function . . . . .	39
9-18) Table of Set Point Shift Function . . . . .	40

## 9. Operation Function

### 9-1) Digital Panel

for Dispense Model

for Cool Select Zone™

### 9-2) Temperature Control Function

When the system power is initially engaged, the default set temperature are  $-20^{\circ}\text{C}$  for the freezer and  $3^{\circ}\text{C}$  for the set refrigerator, respectively. The numbers shown on the digital display panel stand for the actual compartments temperatures. When the compartment temperatures go down, so do the numbers on the display panel, and finally they reach the set temperatures. Once the system is stabilized, the display temperatures are the set temperature.

#### 1) Freezer Temperature Control.

To select a set temperature, press the Freezer Temp. button. The display shows the set temperature from  $-14^{\circ}\text{C}$  to  $-25^{\circ}\text{C}$  in sequence.

#### 2) Refrigerator Temperature Control.

To select a set temperature, press the Fridge Temp. button. The display shown the set temperature from  $1^{\circ}\text{C}$  to  $7^{\circ}\text{C}$  in sequence.

note) Because of the temperature sensor sensitivity, the refrigerator can be under and/or over cooled when the air flow is blocked by stored foods. (Temperature range of the sensor :  $-9^{\circ}\text{C} \sim 30^{\circ}\text{C}$ )

In the event of a power failure, if the freezer temperature is maintained lower than  $5^{\circ}\text{C}$ , the last selected set temperature and functions memorized in EEPROM will be restored when the power is on.

## Operation Function

### 9-3) Power Freeze and Power Cool Functions

- Select the Power Freeze or Power Cool buttons separately.
- These buttons are toggled ON and OFF and the indicators as well.
- Although you select Power Freeze or Power Cool, the set temperatures in the freezer and refrigerator are not changed.
- The set temperatures for the compartments can be changed while these functions are in use.

#### 1) Power Freeze function

- 1-1) When you press the Power Freeze button, the LED indicator lights right away, but there is 10 seconds lag time to an actual operation. When this button is pressed again, the Power Freeze function stops and the indicator is off immediately.
- 1-2) If you select Power Freeze, both the compressor and the freezer fan run for 10 hours continuously.

note) When the Power Freeze is selected, it enables maximum ice maker output. The ice making interval is reduced from 90 mins to 55 mins (55 mins after the water delivery, if the ice temperature is maintained lower than -7°C, the ice tray will be twisted). When the ice bucket is full before 10 hours of operation, Power Freeze is automatically terminated.

- 1-3) During Power Freeze, the freezer retains the current settings.
- 1-4) When Power Freeze expires, the indicator goes off and the freezer set temperature will be restored.

#### 2) Power Cool function

- 2-1) Power Cool operation and the indicator work exactly same as the Power Freeze function.
- 2-2) When Power Cool is selected, COMP and R-FAN operate continuously until the refrigerator reaches -4°C. This function will be terminated after 2 ½ hr running.

#### 3) When you select Power Freeze and Power Cool together

Each function works at the same time. The COMP and F-FAN run continuously and the R-FAN runs until -4°C in the refrigerator.

#### 4) Initial Power-On

- 4-1) The freezer and the refrigerator temperatures are higher than -10°C and 10°C respectively if, respectively. If Power Freeze is selected, the R-FAN will be off. If Power Cool is selected, the F-FAN will be off.
- 4-2) When both functions are selected, there is no benefit of fast cooling for each compartment.

### 9-4) Child Lock Function

- When the child lock button is pressed for 3 seconds, the child lock indicator is on with an audible tone. when it is locked, all keys can not be modified except the Ice type button. This function will prevent accidental setting that may be caused by children or pets. To unlock the setting functions, press this button for 3 seconds again. Also, this button has another function. When this button is pressed for 3 seconds (lock indication lamp turn on), the heater for sweat control is off at a same time. If sweat is appeared around the cover dispenser or beverage station, press this button for 3 seconds again. then, the light will turn off and the sweat control function will be performed. and all keys will be unlocked at a same time.

## Operation Function

### 9-5) Ice & Water Dispenser Function

- Among several ice-maker functions, the ice extraction function is performed by mechanical system. Only the relay control for a cubed-ice dispensing and the SSR control for the ice chute door are performed electronically.

#### 1) Select Cubed/Crushed/Ice-off function

1-1) The Ice Type button selects Cubed/Crushed/Ice-off options in sequence.

1-2) A default setting is Cubed option.

1-3) If Cubed ice is selected, the Crushed ice bypass solenoid and the geared motor will allow Cubed ice to bypass the ice Crusher.

1-4) If Ice-off is selected, the ice maker will stop working. This option will be terminated when Cubed and Crushed options are selected.

Note) When the Ice-off indicator is on and the remained ice is in tray, only Cubed ice will be dispensed from the ice bucket.

1-5) The ice chute door must be open for 5 seconds after dispensing ceases. After this 5 seconds delay, SSR will be controlled to shut the ice chute door.

Note) Do not force to close the ice chute door. Try to dispense some more ice again to work it automatically.

#### 2) Water Dispenser function

2-1) To dispense water, depress the water dispenser lever located in the dispenser recess.

2-2) When the lever is depressed, the water solenoid valve located in the machine compartment is open to flow water.

2-3) There is no electronic control function for this option.

### 9-6) C-Fan Motor Delay Function of the Machine Compartment

- According to the ambient temperature, the condenser fan located in the machine compartment is operated with different modes.

	Ranges of ambient temp.	Operation
C-FAN Delay function	Above 19°C	C-FAN is ON as soon as the compressor is on.
	16°C ~ 18°C	C-FAN is ON with 5 minutes delay from the compressor on.
	Below 15°C	C-FAN is OFF regardless of the compressor operation.

### 9-7) CoolSelect Zone™ Function (RS21K/J, RS23K/J)

- To select this function, open the refrigerator door and press the button on the control panel of CoolSelect Zone™ drawer.
- When the CoolSelect Zone™ function is selected, the damper inside fan ductwork is open. So the refrigerator cooling is performed first, then the damper is closed to control the CoolSelect Zone™ temperature.

## Operation Function

- 1) Select function
  - 1-1) Using Select button, Cool, Chill(-1°C), and Soft Freeze(-5°C) options can be selected in sequence. Cool option maintains a set temperature of the refrigerator.
- 2) Quick Cool function
  - 2-1) If the Quick Cool is selected, LEDs will flash 60 and Min. The count will be decreased in every minute.
  - 2-2) To cancel this function, press Quick Cool button again or Thaw button or Select button. Otherwise, it will be terminated 60 minutes later automatically.
  - 2-3) After this function ends, this drawer will come back to Cool option.
  - 2-4) A defrost cycle will be postponed until Quick Cool option is finished.
- 3) Thaw function
  - 3-1) When the thaw button is pressed, LEDs will flash 4, 6, 10, and 12 in sequence and Hr.
  - 3-2) The count will be decreased in every hour.
  - 3-3) A cancellation of this function is same as Quick Cool function.
  - 3-4) After this function ends, this drawer will be maintained with -1°C.
  - 3-5) While the compressor is on, this drawer retains a certain temperature and while the compressor is off, the defrost heater is activated and R-FAN is on with a closed position of the damper.

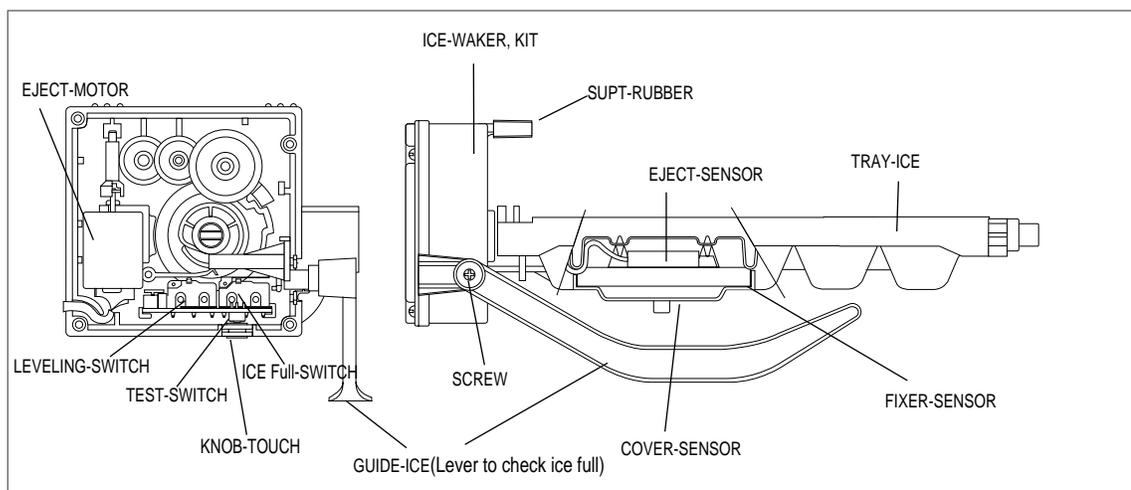

### 9-8) Water Filter Indicator Function

- 1) Filter Indicator
  - 1-1) This indicator initially lights in green. The light color will be changed to orange after 5 month operation then to red at the 6th month. The EEPROM in the control board counts a period of time regardless of a power failure.
  - 1-2) To reset the counter and the light color, press Ice Type button and Child lock button for 3 seconds simultaneously.
  - 1-3) If these two buttons are pressed simultaneously for 5 seconds, this function will cease.
  - 1-4) To restore this function, press these buttons again for 3 seconds.

### 9-9) Ice-Maker Function

- The Ice-maker is referred to the device with an automatic ice production, storage in the ice bucket and dispensing through the ice chute.

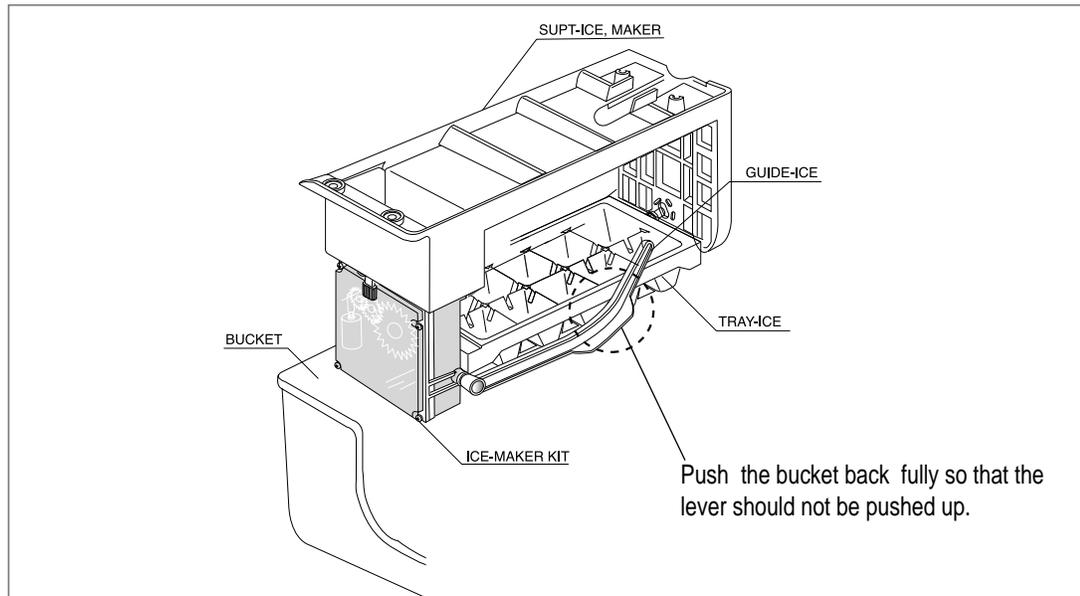

#### 1) Ice-maker parts

## Operation Function

### 2) Preparation of Ice-maker

- 2-1) Connect the water line to the water supply valve of refrigerator to supply water. (See how to connect a water supply line in the owner's manual.)
- 2-2) Push the bucket back fully so that the guide-ice of ice maker should not touch the back of bucket. (If the back of bucket touches the guide-ice of ice maker, the ice maker will not make ice any more because of a ice full signal.)
- 2-3) It takes 6 hours to have a first ice, and throw away 2-3 times of these ice to make sure the supplied water clean.

### 1) Initial Operation function

- 1-1) Whenever the power is on, the control board checks the ice tray leveling with the leveling switch within 2 seconds.
- 1-2) If the leveling switch is not off position, the geared motor will turn to the initial position to make the ice tray leveled.
- 1-3) When the ice tray is leveled, it will remain this position for 2 hours (1 cycle time for ice production).
- 1-4) After 2 hours, the sensor located under the ice tray will measure the tray temperature. If the temperature is maintained lower than  $-7^{\circ}\text{C}$  for 5 minutes, and the ice full switch is off position, the ice tray twisting process will begin.

#### <Reference table>

Leveling S/W	Ice full S/W	Judgement	Remark
ON("LOW")	ON("LOW")	Not ready	· MICOM Port PIN #51: Leveling PIN #51: Ice full · Port level OFF : 4.5V ↑ ON : 0.5V ↓
ON("LOW")	OFF("HIGH")	Not ready	
OFF("HIGH")	ON("LOW")	Not ready(Ice bucket with full of ice)	
OFF("HIGH")	OFF("HIGH")	Ready	

## Operation Function

### 2) Water Supply function

- 2-1) When the ice tray is leveled again after ejecting ice, the water solenoid valve will be controlled to supply water by time check basis. (See the "Time to supply water" Table)

### 3) Ice production

- 3-1) After 90 minutes pass from the water supply, the control board will check the temperature.  
 3-2) If the sensor reads the temperature lower than  $-7^{\circ}\text{C}$  for more than 5 minutes, than the ice production process is completed.

### 4) Test function

- In order to operate a test function, press the knob (Test Switch) for 1.5 second.
  - This function can be used to check a proper working, to clean the ice tray, and to adjust the water level in the ice tray.
- 4-1) This function only works when the ice tray is leveled and the ice full signal is cleared.  
 4-2) When the water line is connected, each process such as a water supply, ejection, and leveling, can be investigated by this button.

### 5) Ice off function

- 5-1) When the Ice off option is selected by Ice Type button, the ice making process will cease.  
 5-2) When the ice making process ceases, the final state will be the ice tray with the supplied water.  
 5-3) When Cubed or Crushed option is selected again, the control board will check an accumulated time period. After making it 90 minutes and when the ice tray temperature is acceptable, ice ejection process will begin.

### 6) Functions when the freezer door is open

- When the freeze door is open, all ice maker related processes will cease in order to minimize noise and to prevent ice from dispensing.
- 6-1) The ice tray stops moving regardless of the position.  
 6-2) The water supply process remains working as usual.  
 6-3) If the ice tray is in the middle of ice ejecting process, close the freezer for 30 seconds and check if the tray is leveled. If it is not leveled, it must be out of order.

## 9-10) Defrost Function

- 1) A defrost is determined based on the accumulated compressor on-time.
- 2) When the power is engaged for the first time, the defrost cycle for the freezer and the refrigerator will begin after 4 hours of the accumulated compressor on-time.
- 3) A defrost interval depends on the ambient temperature, the number of door openings, and the door open time.
- 4) A minimum interval is 6 hours and a maximum is 8 hours for the refrigerator, and 12 hours and 16 hours for the freezer, respectively.
- 5) The defrost heater on-time is determined by the defrost sensors as follow :

	Refrigerator	Freezer
Heater ON	Below $10^{\circ}\text{C}$	-
Heater OFF	$17^{\circ}\text{C}$	$10^{\circ}\text{C}$

## Operation Function

### 9-11) Forced Operation Function (Pull-down / R-Defrost / R.F-Defrost / Cancellation)

- This function enables a pull-down mode, a defrost mode for the refrigerator only, a defrost mode for the freezer and the refrigerator at the same time, and a cancellation of this function.
- Press Power Freeze and Fridge Temp. buttons for 8 seconds simultaneously to get in the ready mode for a forced operation.
- The display panel will return to normal after 20 seconds in the ready mode.
- At the ready mode, press any button(except Ice Type and Child Lock) once to start a pull-down operation, twice for a defrost cycle for the refrigerator, three times for a defrost cycle for the freezer and the refrigerator, and finally four times for cancellation of this function.
- Another way to cancel this function is to simply plug out and in the power cord.

Press both button for 8 seconds at the same time.

#### 1) Pull-down Operation

- 1-1) At the ready mode, press any button once then the buzzer will beep (ON for 1/2 second and OFF for 1/2 second) until this mode is cancelled.
- 1-2) At this pull-down mode, the compressor will start immediately (No 5 minute delay) and if the system is in the defrost cycle, it will be cancelled right away.

Note) If this pull-down mode begins right after the compressor was off, the compressor may not start to run due to an overload condition.

- 1-3) At this mode, the compressor and freezer fan will operate continuously for 24 hours and the refrigerator fan will be on and off according to the set temperature(-20 °C)
- 1-4) After 24 hour operation, the system will be cycled at -25°C for the freezer and 1°C for the refrigerator.
- 1-5) In order to cancel this mode at any time, select the next mode on the ready mode or power off the system.

#### 2) Defrost operation

- 2-1) At the pull-down mode, press any button again on the ready mode to begin the defrost cycle for the refrigerator.
- 2-2) The beep sound continues for 3 second at the beginning, then ON for 3/4 seconds and OFF for 1/4 second until this mode cease.
- 2-3) After this operation, the system will come back to normal operation.
- 2-4) At this mode, press any button again on the ready mode to operate the defrost cycles for both compartments.
- 2-5) The beep sound continues for 3 seconds at that time, then ON for 1/4 second and OFF for 3/4 seconds until the defrost operation cease.

#### 3) Cancellation

- 3-1) At the R,F-Defrost mode, press any button again on the ready mode to return to a normal operation.
- 3-2) Simply unplug the power cord, then plug it again to return to a normal operation.

## Operation Function

### 9-12) Sound Function

- 1) Sound function
  - 1-1) To make sure a command input, whenever a button is pressed, a "ding-dong" sounds.
  - 1-2) When two or more buttons are pressed simultaneously or if a wrong button is pressed, there is no sound.
- 2) Door Open Alarm
  - 2-1) When the doors remain open for 2 minutes, there are 10 times beeps.
  - 2-2) If the doors continue to remain open more than 2 minutes, the additional 10 beeps interval will change to 1 minute.
  - 2-3) The beeps will cease immediately when the doors are closed.

### 9-13) Exhibition Function

- This function is for a display purpose on the floor of show room or store.
- 1) Mode ON/OFF
    - 1-1) For the exhibition mode, press Power Freeze and Freezer Temp. buttons simultaneously for 8 seconds until a "ding-dong" sounds.
    - 1-2) Press the same time buttons again for 8 seconds to cancel this mode put with a "ding-dong" sound.
  - 2) Operation
    - 2-1) Most of the system function except the compressor operation are working properly.
    - 2-2) There is no defrost cycle in this mode.

### 9-14) Self-Diagnostics Function

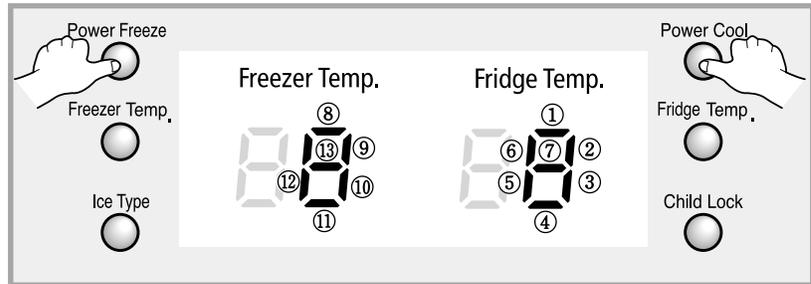

- 1) Self-Diagnostics in the initial Power ON
  - 1-1) The control board performs a self diagnostics test within 1 second and check out the temperature sensors abilities.
  - 1-2) If a sensor failure occurs, a corresponding LED segment will blink with a beep.
  - 1-3) When a LED segment blinks, only the cancellation function (Press Power Freeze and Power Cool buttons simultaneously for 8 seconds) is acceptable.
  - 1-4) After a replacement of bad sensor or a cancellation of this function, this self diagnostics will end.
- 2) Self-Diagnostics in the normal operation
  - 2-1) To select this function, press Power Freeze and Power Cool buttons simultaneously for 8 seconds with an audible tone.
  - 2-2) In the self diagnostic mode, only corresponding LED segments will be illuminated (see the check list on the next page)
  - 2-3) After a 30 second illumination of error signal, the system will return to the normal operation.

# Operation Function

## \* Self-diagnostics check list

NO	Error
①	ICE-MAKER SENSOR
②	R-SENSOR
③	R-DEF-SENSOR
④	R-FAN ERROR
⑤	I/M function error
⑥	CoolSelect Zone™ SENSOR
⑦	R-DEFROST ERROR
⑧	EXIT-SENSOR
⑨	F-SENSOR
⑩	F-DEF ERROR
⑪	F-FAN ERROR
⑫	C-FAN ERROR
⑬	F-DEFROST ERROR

Press both buttons simultaneously for 8 seconds

If any LEDs blink, the corresponding sensors and components must be checked for an error.

## \* Error items of self-diagnostics

NO	Error items	LED Display	Details	Remarks
01	I/M-SENSOR		I/M sensor connector missing; contact failure, electric wire cut, short-circuit; I/M-sensor failure; and so on	Indicate Error when the temperature sensed by I/M-sensor is higher than 65°C or lower than -50°C.
02	R-SENSOR		REF sensor connector missing; contact failure, electric wire cut, short-circuit; R-sensor itself failure; and so on	Indicate Error when the temperature sensed by R-sensor is higher than 65°C or lower than -50°C.
03	REF DEFROST SENSOR		REF evaporator internal defrosting sensor connector missing; contact failure, electric wire cut, short-circuit; sensor itself failure; and so on	Indicate Error when the temperature sensed by R defrosting sensor is higher than 65°C or lower than -50°C.
04	R-FAN ERROR		R-Fan motor operation failure; feedback signal line contact failed, electric wire cut, short-circuit; and so on	Indicate Error if the F and G signals generated by the FAN-motor operation are not input.
05	I/M function ERROR		Ice-ejector and level failed three times or more	
06	CoolSelect Zone™ sensor		CoolSelect Zone™ sensor connector missing; contact failed, electric wire cut, short-circuit; CoolSelect Zone™ sensor itself failed; and so on.	Indicate Error when the temperature sensed by CoolSelect Zone™ sensor is higher than 65°C or lower than -50°C.
07	R-DEFROST ERROR		In the refrigerator room, if frost removal mode is finished due to limited time of 80 minutes. Error is displayed.	-
08	Ambient Air SENSOR		Air sensor connector missing; contact failure, electric wire cut, short-circuit; open air sensor itself failure; and so on	Indicate Error when the temperature sensed by the open air sensor is higher than 65°C or lower than -50°C.
09	F-SENSOR		FRE sensor connector missing; contact failed, electric wire cut, short-circuit; F-Room sensor itself failure.	Indicate Error when the temperature sensed by F-sensor is higher than 65°C or lower than -50°C.
10	FRE Defrost SENSOR		FRE evaporator defrosting sensor connector missing; contact failed, electric wire cut, short-circuit; sensor itself failure; and so on	Indicate Error when the temperature sensed by F-defrosting sensor is higher than 65°C or lower than -50°C.
11	F-FAN ERROR		F-Fan motor operation failure; feedback signal line contact failure, motor's electric wire missing; and so on.	Indicate Error if the F and G signals generated by the FAN-motor operation are not input.
12	C-FAN ERROR (COMP-FAN)		C-Fan motor operation failure; feedback signal line contact failure, motor's electric wire missing; and so on.	Indicate Error if the F and G signals generated by the FAN-motor operation are not input
13	F-DEFROST ERROR		In the freezer room, if frost removal mode is finished due to limited time of 80 minutes. Error is displayed	-

## Operation Function

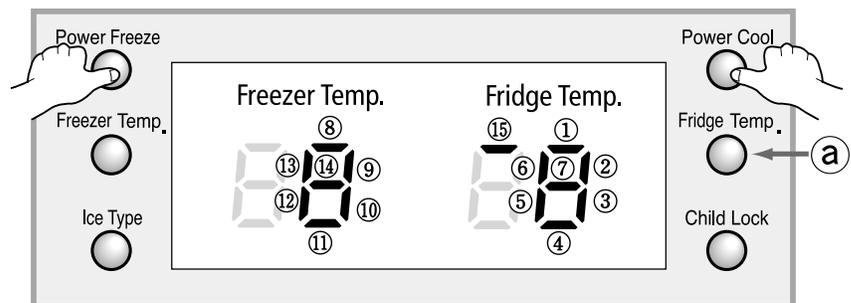

### 9-15) Load Operation Check Function

- 1) In the normal operation, press Power Freeze and Power Cool buttons simultaneously for 6 second, then the display panel will blink for 2 seconds.
- 2) Press Fridge Temp. button (a) to get into this check mode with an audible tone.
- 3) Each illuminating LED segment stands for the component which has an output signal from the control board.
- 4) This mode will terminate automatically after 30 seconds.

#### \* Table of Load Mode Check List

NO	Contents
①	R-FAN High or AC motor operation
②	R-FAN Low
③	R-DEF heater
④	Start mode
⑤	Overload mode
⑥	Low-temperature mode
⑦	Exhibition mode
⑧	COMP
⑨	F-FAN High
⑩	F-FAN Low
⑪	F-DEF-Heater
⑫	C-FAN High
⑬	C-FAN Low
⑭	Dispenser-Heater
⑮	Damper
-	Normal condition

Press both buttons simultaneously for 6 seconds, all LED lights will be turned off. At this time press button (a)

- \* For the R-FAN, only one rpm is applied for the current models, so that ① and ② show R-FAN operation only.
- \* The F-FAN and C-FAN are operated to High/Low rpm automatically according to the operational condition.
- \* ④⑤ and ⑥ only explain the system operation status according to the ambient condition

### 9-16) Restoration Function for Power Outage

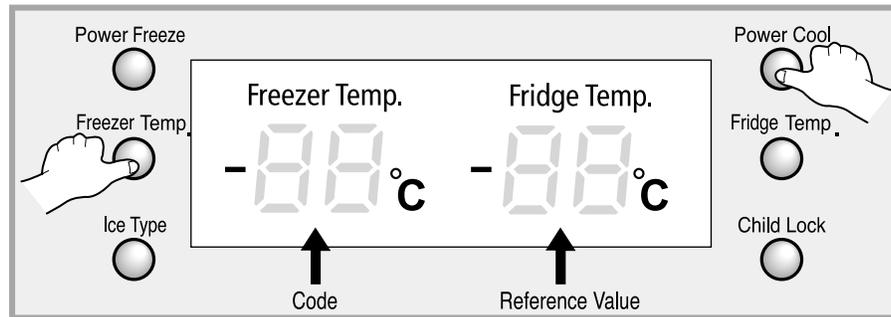

- 1) When the freezer temperature is lower than 5°C, all functions on the display panel will be restored.
- 2) When the freezer temperature is higher than 5°C, all functions will be initialized.  
(-20°C for the freezer, 2°C for the refrigerator, and Cubed for the Ice Type)

### 9-17) Set Point Shift Function

- Press Freezer Temp. and Power Cool buttons simultaneously for 12 seconds to get into this mode.
- In this mode, only the display LEDs for temperature will be ON.

## Operation Function

Press both buttons simultaneously for 12 seconds

- 1) Initially, all products set the code, "0" and press Power Cool or Fridge Temp. to increase or decrease # of Reference.
- 2) To increase or decrease #of Code,press the Power Freeze or Freezer Temp. so that it can be adjusted such as the temperatures of freezer,refrigerator,ice maker,and CoolSelect Zone™,and the quantity of water supply.
- 3) After 20 seconds from adjustment, a new setting will be stored in EEPROM and return to the normal display.

### 9-18) Table of Set Point Shift Function

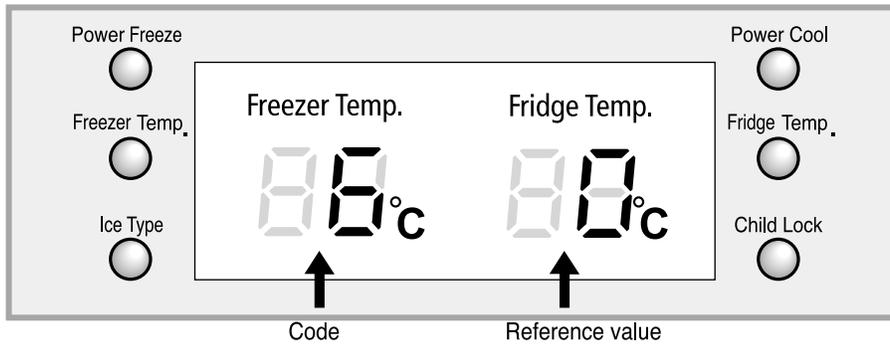

- 1) Shift the freezer temperature sensor

Reference Value	0
-----------------	---

Code	Temp. shift	Code	Temp. shift
0	0	8	0.5°C
1	-0.5°C	9	1.0°C
2	-1.0°C	10	1.5°C
3	-1.5°C	11	2.0°C
4	-2.0°C	12	2.5°C
5	-2.5°C	13	3.0°C
6	-3.0°C	14	3.5°C
7	-3.5°C	15	4.0°C

# Operation Function

Example) If you are lowering the current temperature of the freezer by  $-3.0^{\circ}\text{C}$

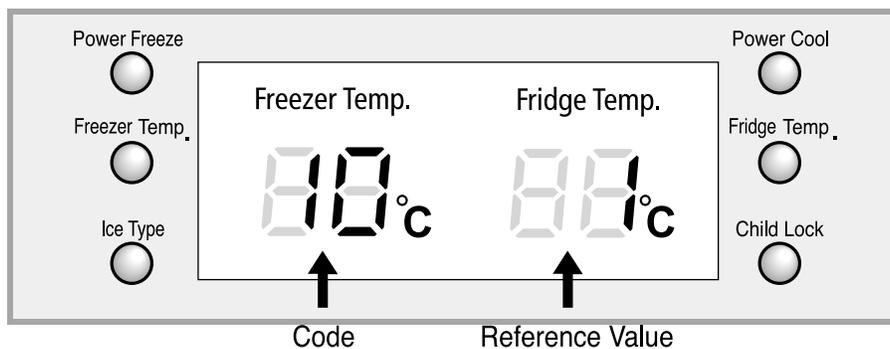

2) Shift the refrigerator temperature sensor

Reference Value	1
-----------------	---

Code	Temp. shift	Code	Temp. shift
0	0	8	$0.5^{\circ}\text{C}$
1	$-0.5^{\circ}\text{C}$	9	$1.0^{\circ}\text{C}$
2	$-1.0^{\circ}\text{C}$	10	$1.5^{\circ}\text{C}$
3	$-1.5^{\circ}\text{C}$	11	$2.0^{\circ}\text{C}$
4	$-2.0^{\circ}\text{C}$	12	$2.5^{\circ}\text{C}$
5	$-2.5^{\circ}\text{C}$	13	$3.0^{\circ}\text{C}$
6	$-3.0^{\circ}\text{C}$	14	$3.5^{\circ}\text{C}$
7	$-3.5^{\circ}\text{C}$	15	$4.0^{\circ}\text{C}$

Example) If you are raising the current temperature of the refrigerator by  $+1.5^{\circ}\text{C}$

## Operation Function

- The following options is limited to a model with the Ice Maker.

### 3) Adjust the time to supply water for the ice maker

Reference Value	3
Code	Time to supply water
0	5 sec
1	4 sec
2	3 sec
3	6 sec
4	7 sec
5	8 sec
6	9 sec
7	10 sec
8	12 sec
9	13 sec
10	15 sec
11	17 sec
12	19 sec
13	21 sec
14	23 sec
15	25 sec

### 5) Shift the CoolSelect Zone™ temperature sensor.

Reference Value	20
Code	CoolSelect Zone™ temperature sensor
0	0
1	-0.5°C
2	-1.0°C
3	-1.5°C
4	0.5°C
5	1.0°C
6	1.5°C
7	2.0°C

### 4) Shift the Ice maker temperature sensor

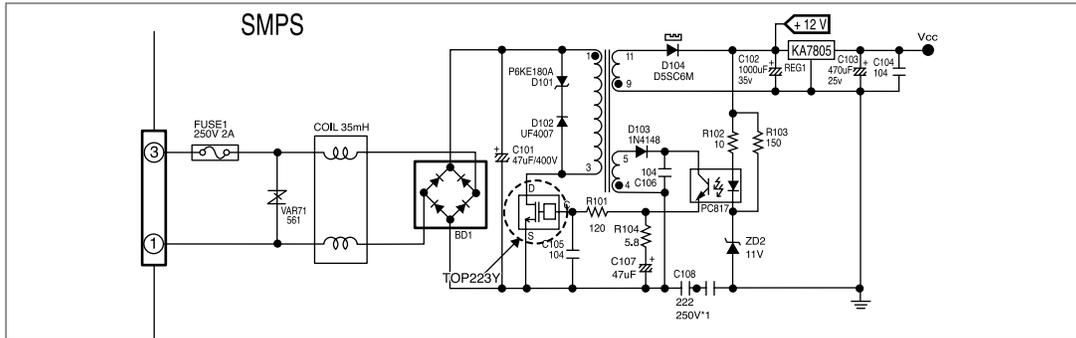

Reference Value	4
Code	Ice maker temperature sensor
0	-7°C
1	-6°C
2	-8°C
3	-9°C
4	-10°C
5	-11°C
6	-12°C
7	-13°C

# Circuit Descriptions

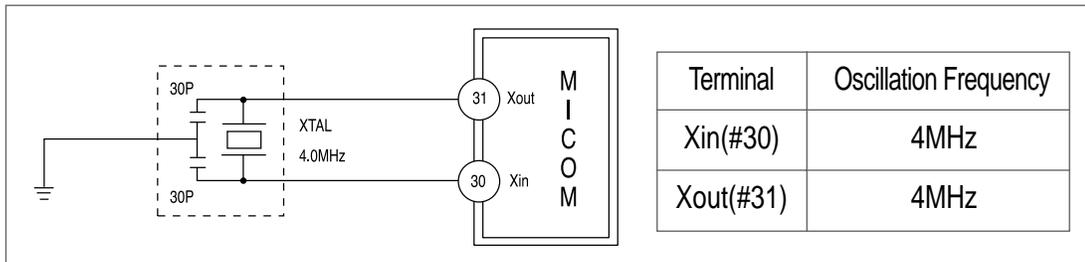

## 10-1) Source Power Circuit

This circuit shows SMPS(Switch Mode Power Supply) which converts AC input voltage (230V, 50Hz) to a high DC voltage (about 320V). The input AC source power is converted to DC through a wave rectifier (BD1) and the converted DC power will generate a constant waveform on the switching transformer using a high speed (100KHz) switching motion of TOP223Y. The D104 will rectify the generated voltage and transform into a steady 12V DC source power used for the digital display panel and relays. The regulator (KA7805) finally transforms into 5V DC source power for the control board and sensor's circuits.

Caution) Be careful to handle this circuit due to high voltages (AC115V, DC170V)

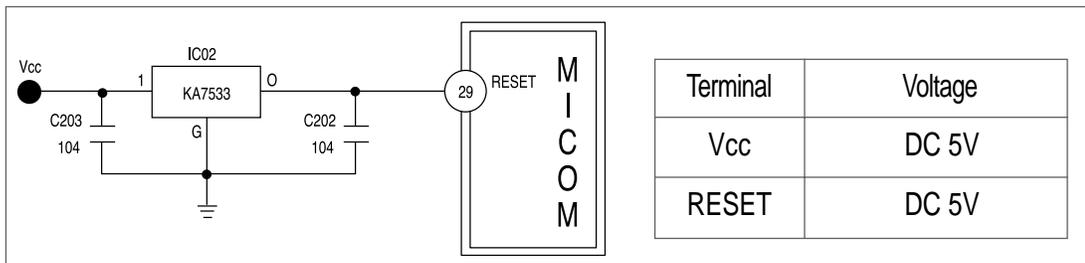

## 10-2) Oscillator Circuit

This is oscillator circuit to generate synchronous clocks used to calculate the time for the microprocessor operation.

Note) If the specification of a resonator changes, micro-processor can not work properly.

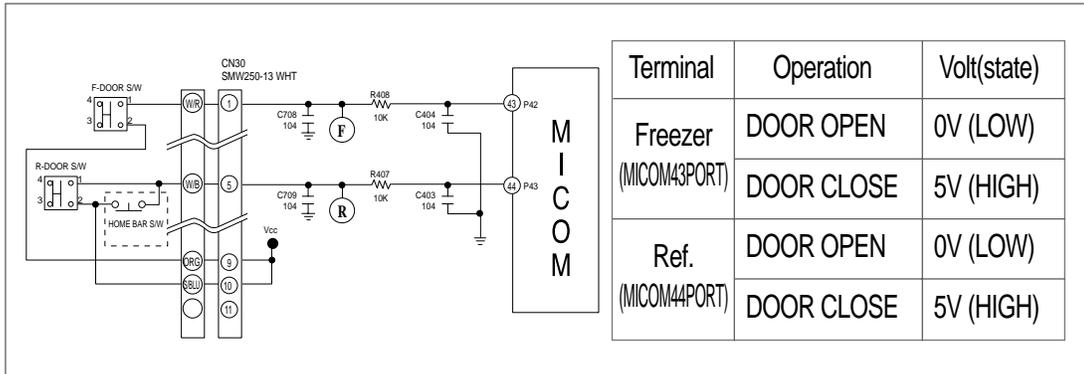

## 10-3) Reset Circuit

The reset circuit is to initialize the values RAM & other sectors of micro-processor. When the power is engaged initially, the reset voltage becomes "Low," and it keeps "High" in the normal operation.

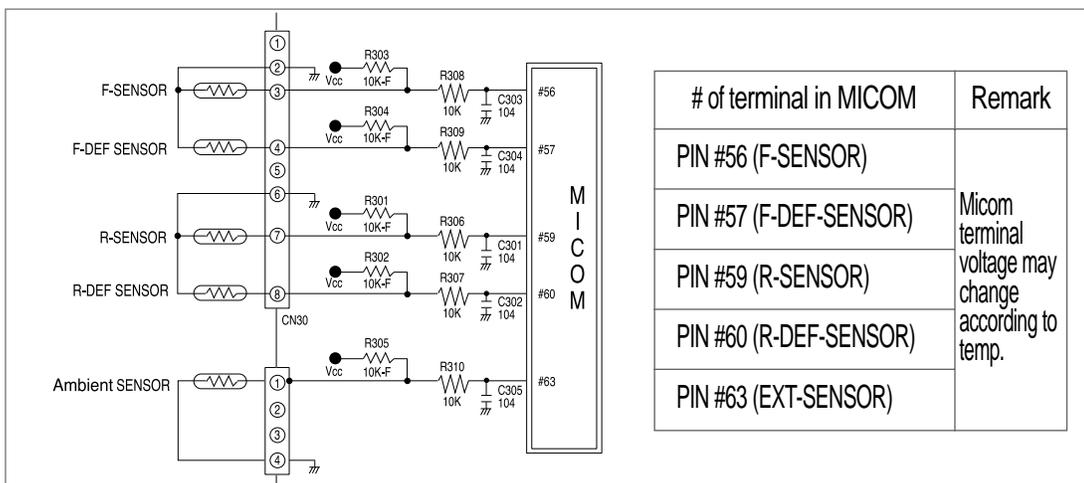

## Circuit Descriptions

### 10-4) Door S/W Sensing Circuit

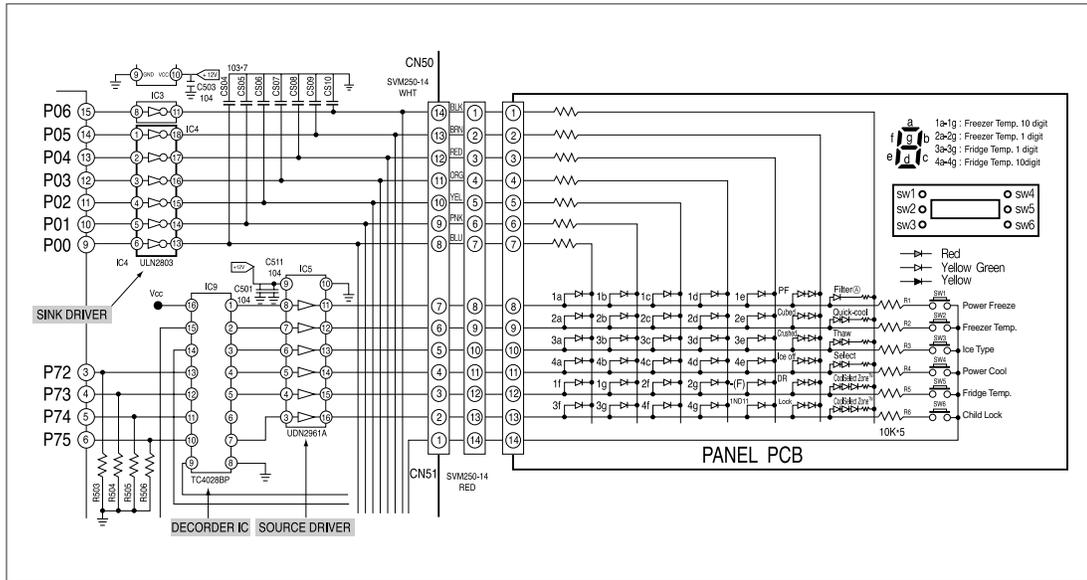

- 1) F-Room door open is picked up based on the state (5V/0V) of the MICOM No.43 Port.  
When the F-Room door opens, it becomes short between the Door S/W 1 & 2. And, 5V is supplied in the following order. CN30 No. ⑨ → F-Door S/W → CN30 No. ① → R408(1 0K) → MICOM 43 PORT  
When the state of MICOM 43 PORT is 0V, the door is picked up as closed. When it is 5V, the door is considered to be open.
- 2) R-Room door open is picked up based on the state (5V/0V) of the MICOM No.44 Port.  
When the R-Room door opens, it becomes short between the Door S/W 1 & 2. And, 5V is supplied in the following order. CN30 No. ⑩ → R-Door S/W → CN30 No. ⑤ → R407(1 0K) → MICOM 44 PORT  
When the state of MICOM 44 PORT is 0V, the door is picked up as closed. When it is 5V, the door is considered to be open.
- 3) When door open is detected, the MICOM have the relevant Fan Motor stop and the relevant Room Lamp light up.  
Depending on the state of Door Open/Close, there are following operations; Lamp On/Off, Fan Motor On/Off and Door open alarm. So, check relevant items upon A/S.

### 10-5) Temperature Sensing Circuit

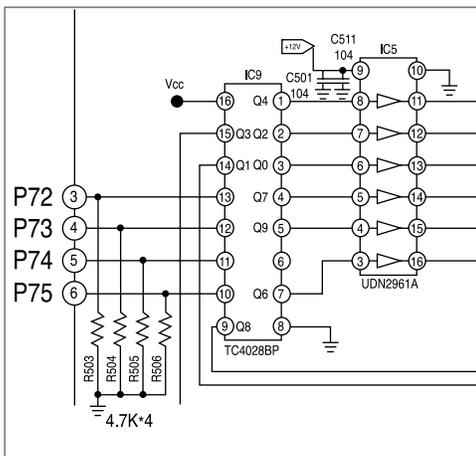

- 1) A thermistor with a negative temperature coefficient (NTC) is used for a temperature sensor.
- 2) Resistors, R 306 ~ R310 and capacitors, C 301 ~ C 305 are used for a noise protection purpose.
- 3) For the F-sensor, the input voltage into the micro processor (MICOM),  $V_F$  is calculated by  $(R_{th} \times V_{cc}) / (R_{303} + R_{th})$ , where  $R_{th}$  is a corresponding resistance to the thermistor's output (See Ref. 6 in Appendix).
- 4) The F-Def sensor is connected with a bimetal and a temperature sensor is in parallel. In a normal operation of the system, the bimetal is on and 0V is input into the micro-processor. During a defrost cycle, the bimetal will be off from 54°F, and a divided voltage with R304 enter to the micro-processor to keep sensing the set temperature.

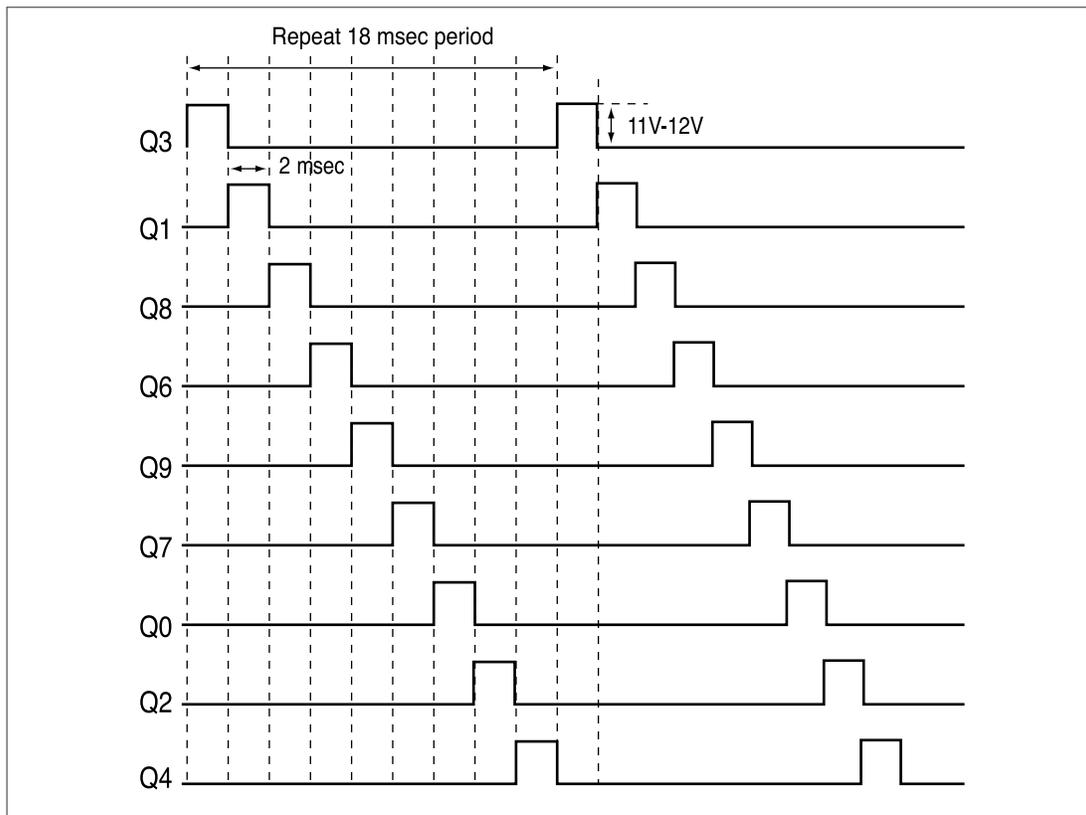

## 10-6) Key Scan and Display Circuit

### 1) Key Scan and display operation.

The model uses a decoder IC which 4 inputs and 9 outputs. If the IC 9 decoder (TC4028BP) receives signals from MICOM pins (3~6), an output signal per 2 milliseconds comes out from Q3, Q4, Q8, Q6, Q9, Q7, Q0, Q2, and Q4 pin in sequence. This signal enters to a driver IC input terminal of the CoolSelect Zone™ PCB and IC5 (TD 62783AP), then approximate 11V peaks will generate from an output terminal as shown on the next page.

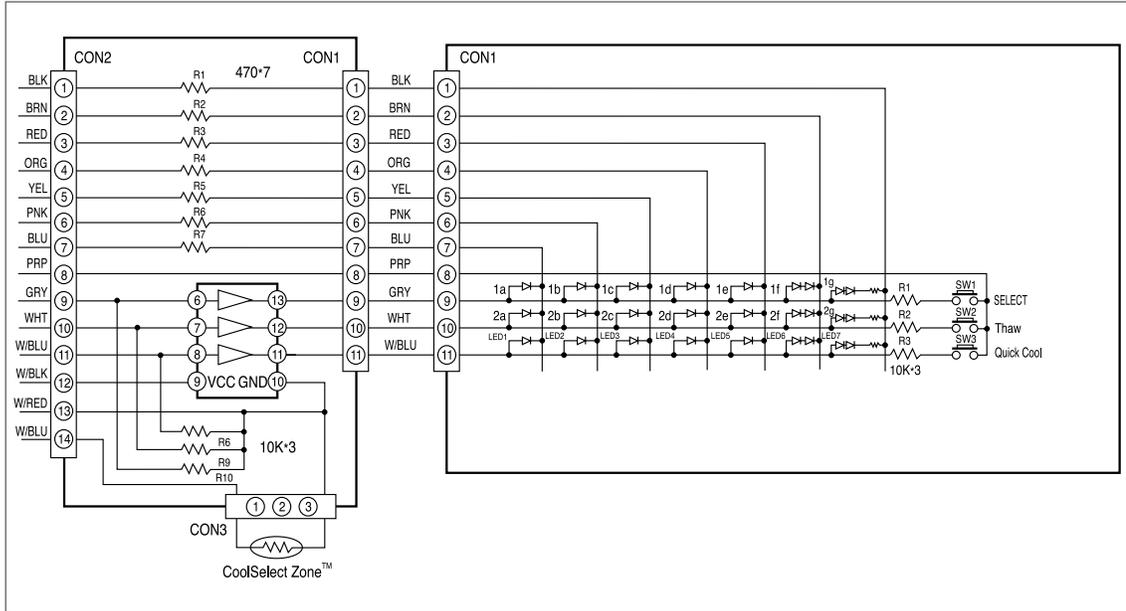

The step signals of DC 11 ~ 12V will be generated periodically. If a sink signal outputs from IC4, DC 11-12V will be applied to the LED input terminal and sink the LED output terminal to 0V. Therefore, LED will be ON for 2 milliseconds.

## 2) Key Scan

The 6 step signals, Q6~Q4 are applied to scan the 6 keys (buttons). When SW6 is pressed, the step signal from Q6 will be reduced to 5V and entered to the MICOM, then MICOM will match a corresponding function for SW6 key.

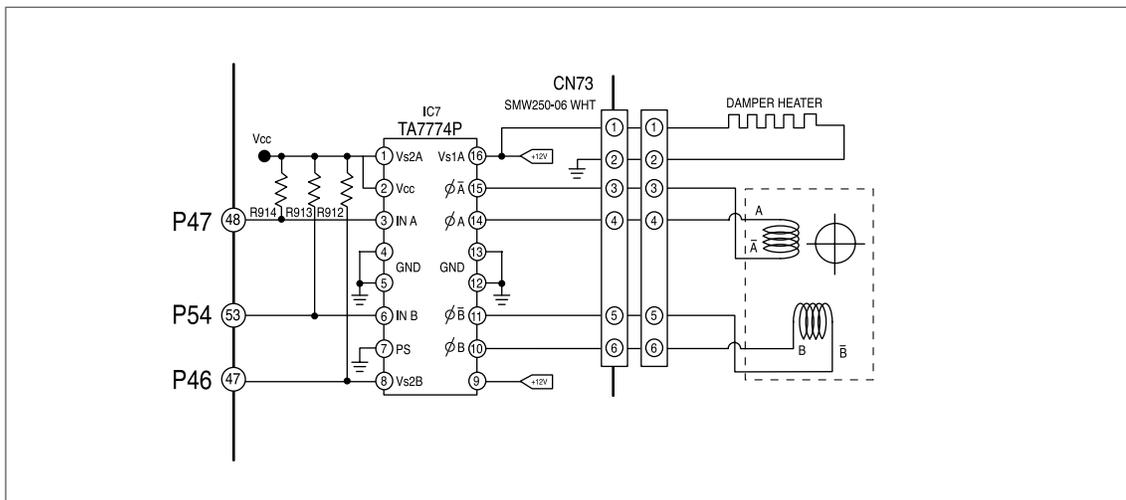

## 10-7) CoolSelect Zone™ Panel Circuit

### 1) CoolSelect Zone™ display panel and temperature sensor

- 1-1) CoolSelect Zone™ is referred to as a storage drawer to implement features of Quick cool, Thaw, and Select (Soft Freeze, Chill, and Cool).
- 1-2) CoolSelect Zone™ has an additional display panel. Panel LED are off while the doors are closed. When a door is open, micro-processor senses its signal and LEDs will be on.
- 1-3) The basic operational principle is the same as the key scan process.
- 1-4) The additional sensor can measure the temperature of CoolSelect Zone™. This sensor enables to control the features of CoolSelect Zone™.

### 2) Damper drive circuit

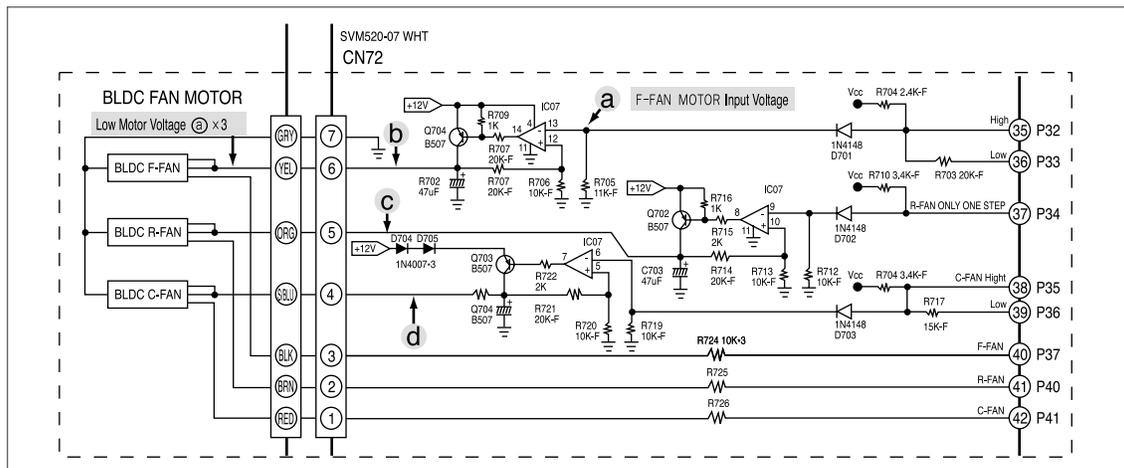

## Circuit Descriptions

- 2-1) CoolSelect Zone™ Drawer is controlled by a damper to supply or block cold air. For Quick Cool, the damper will be close. So cold air is supplied only to CoolSelect Zone™ Drawer. For Thaw, the evaporator heater of refrigerator is ON and the damper is controlled by the refrigerator temperature.
- 2-2) The stepping motor controlled by a Driver IC TA7774P(IC7) operates the damper. The stepping motor uses 4 combined signals to open and close the damper.

Note) To prevent the malfunction from a high humidity, a DC 12V, 1 watt heater is mounted and activated continuously.

### 10-8) Fan Motor (BLDC) Drive Circuit

#### 1) Motor drive circuit

1-1) This refrigerator adopts a BLDC motor to reduce energy consumption. Motors of the freezer, refrigerator and the machine compartment are composed of the BLDC. For RS2533, R-fan is operated by AC 115V Motor.

1-2) Voltages between high-speed and low-speed

	Voltage of motor			Remark
	Measure b (F-FAN)	Measure C (R-FAN)	Measure d(C-FAN)	
High	11.1V	10V	10V	In the normal operation, MICOM No. 40, 41 and 42 applies a constant frequency; and MICOM defects the signal to check the failure of motor. (frequency(Hz) × 12 = motor rpm)
Low	10V	10V	8.3V	

Note) Under the conditions, the fans will be operated in 2 options, such as High and Low mode. Generally, it is operated in the High mode during a day time and in the Low mode at night.

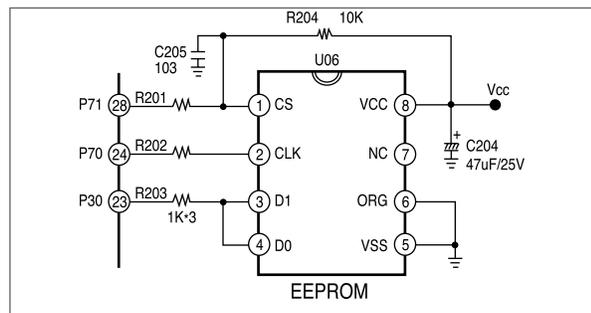

## Circuit Descriptions

1-3) When the motor rpm is in 600~700, it will stop automatically and it tries to resume after 10 seconds. If the motor is not working properly after 5 time trials, it will rest for 10 minutes, then try to resume again. This process will be done continuously.

Note) If there is an abnormal situation for the motor, the self-diagnostics will show the corresponding LED segment.

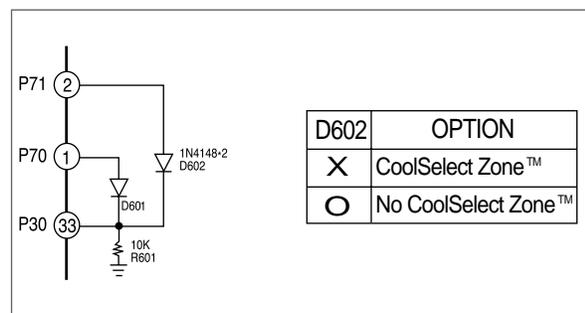

### 10-9) EEPROM Circuit

EEPROM is semiconductor memory not to be erased. It can be used in the area of unstable electric power.

### 10-10) Option Circuit

There are a variety of models that have a different function. A different model can set up to use option circuit as shown.

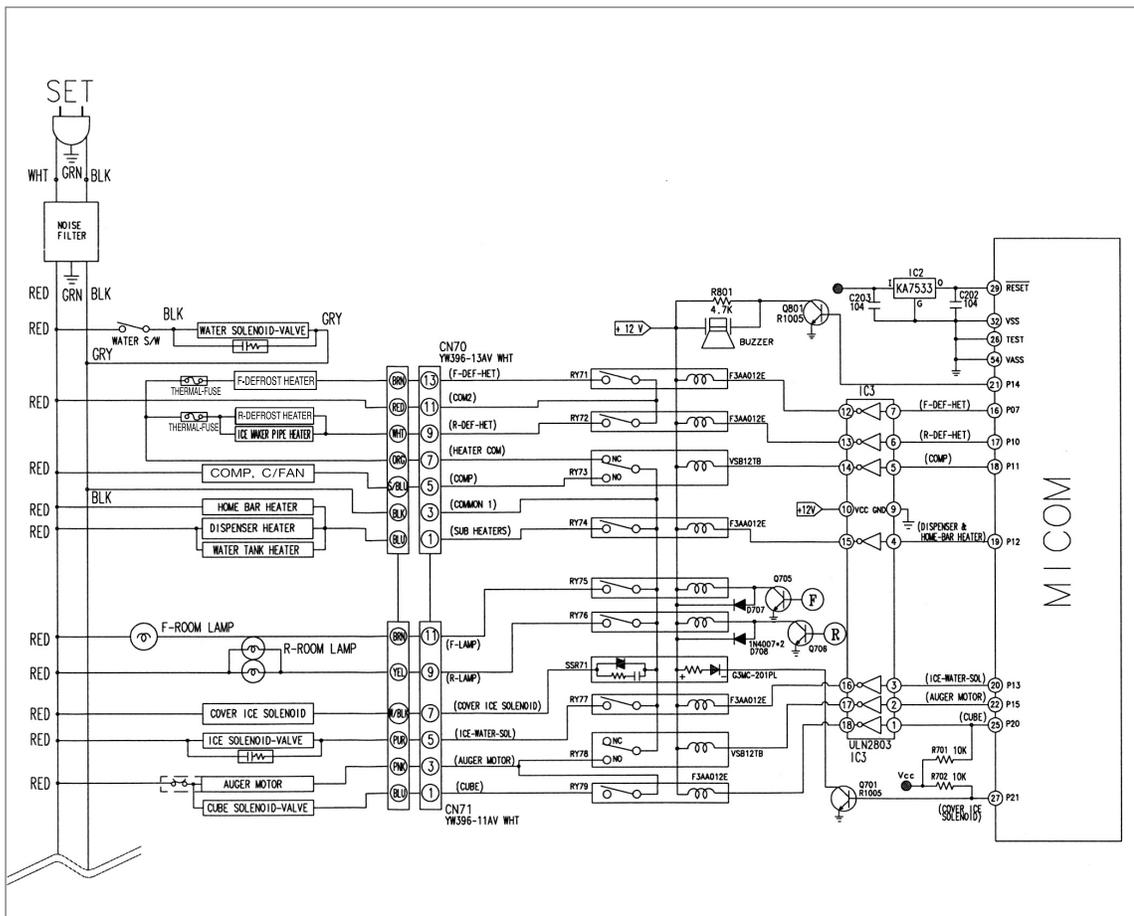

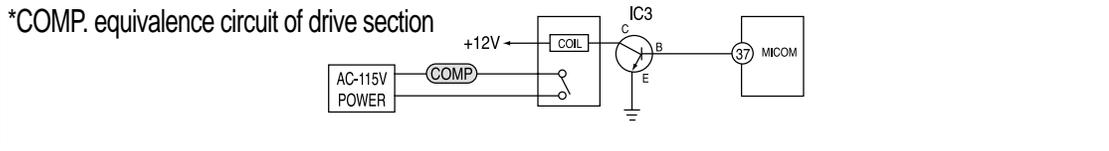

### 10-11) Load Drive Circuit

- 1) The control of load in the system is accomplished by the main PCB.
- 2) Most of relays or SSRs can control the compressor, refrigerator/freezer defrost heater, and several option functions.
- 3) For the compressor, #18 pin of micro processor signals High (5V). This signal enters #5 pin of IC3 and #14 of output terminal which have base and collector functions of IC3 turns on and connects the GND. Relay 73 will be grounded through #14 of IC. Magnetic field will generate so that the second side of RY73 is activated and 115V is supplied to the compressor. On the other hands, if #18 of micro processor turns Low(0V), #5 of IC3, the current of RY 73 relay, and magnetic field will shut down in sequence. A contact point in secondary side of Relay 73 is off. Finally compressor will stop.

# Circuit Descriptions

4) The principles of other loads is the same as 3) item described.

Note) SSR(Solid State Relay) is a kind of Relay.

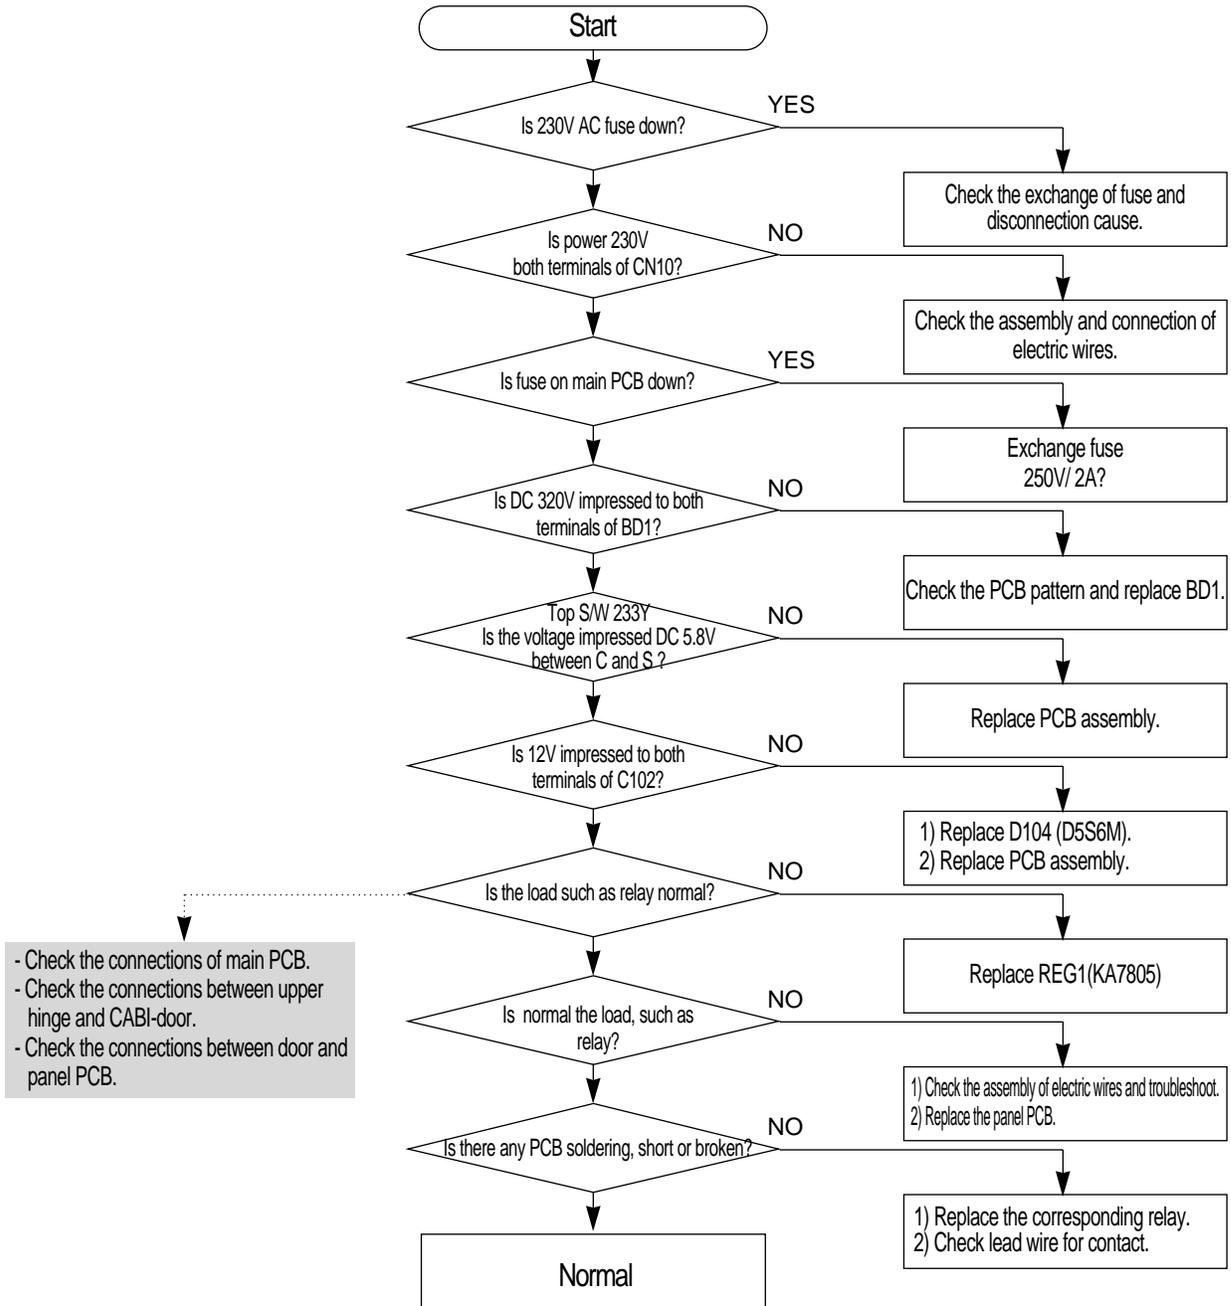

# 11. Diagnostics

## 11-1) If power is not ON

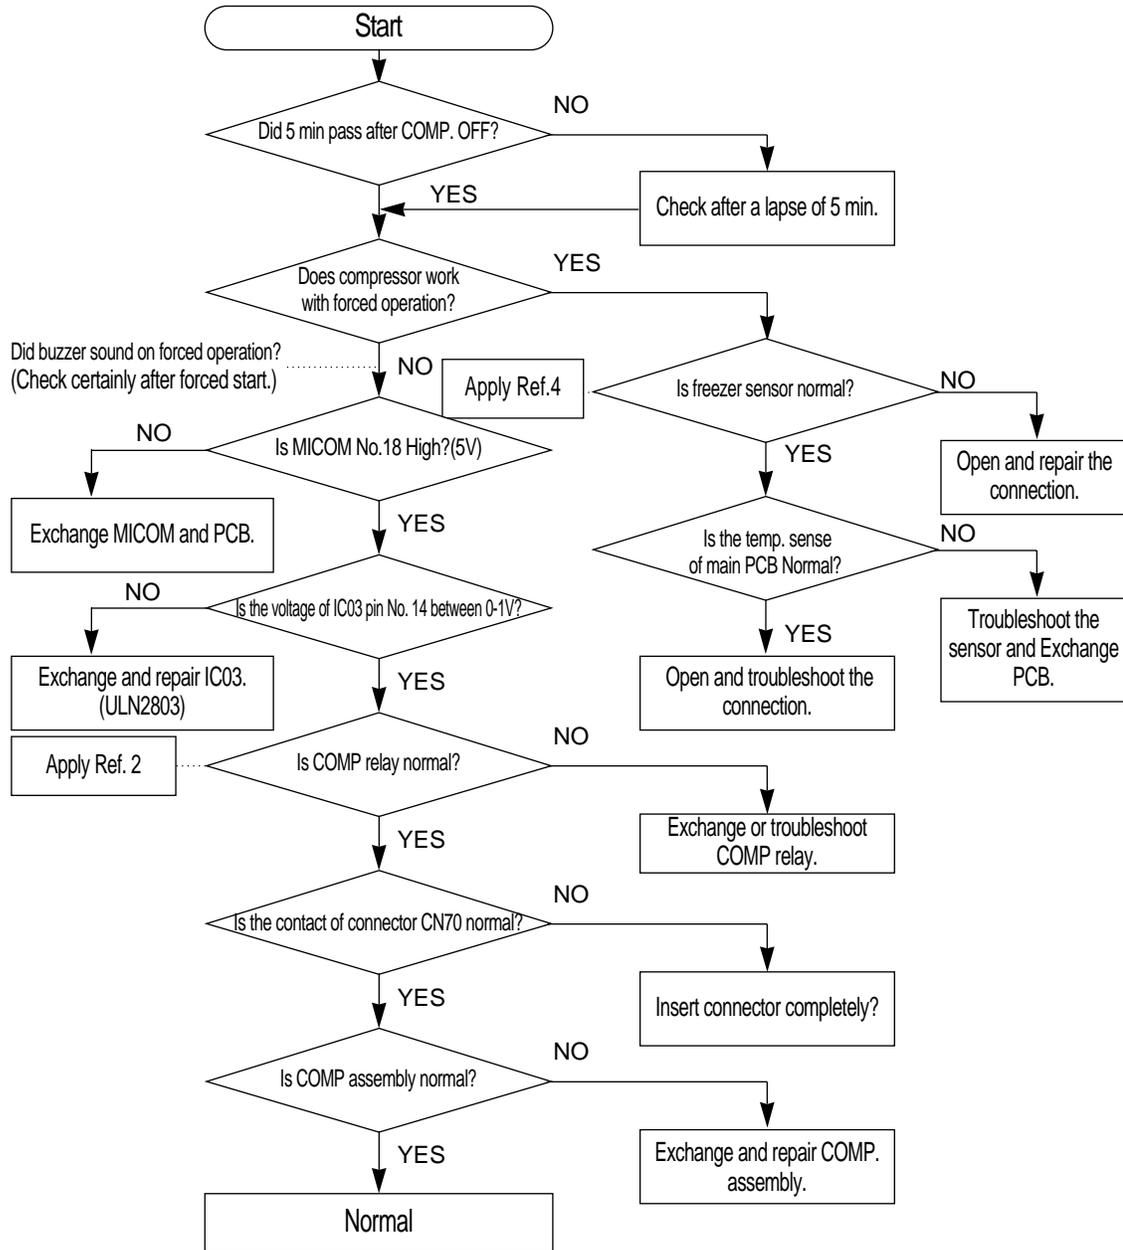

### Caution!

At the power of main PCB, the 115V power and a high-voltage over DC 170V occur. Please take care of yourself on repair and measurement.

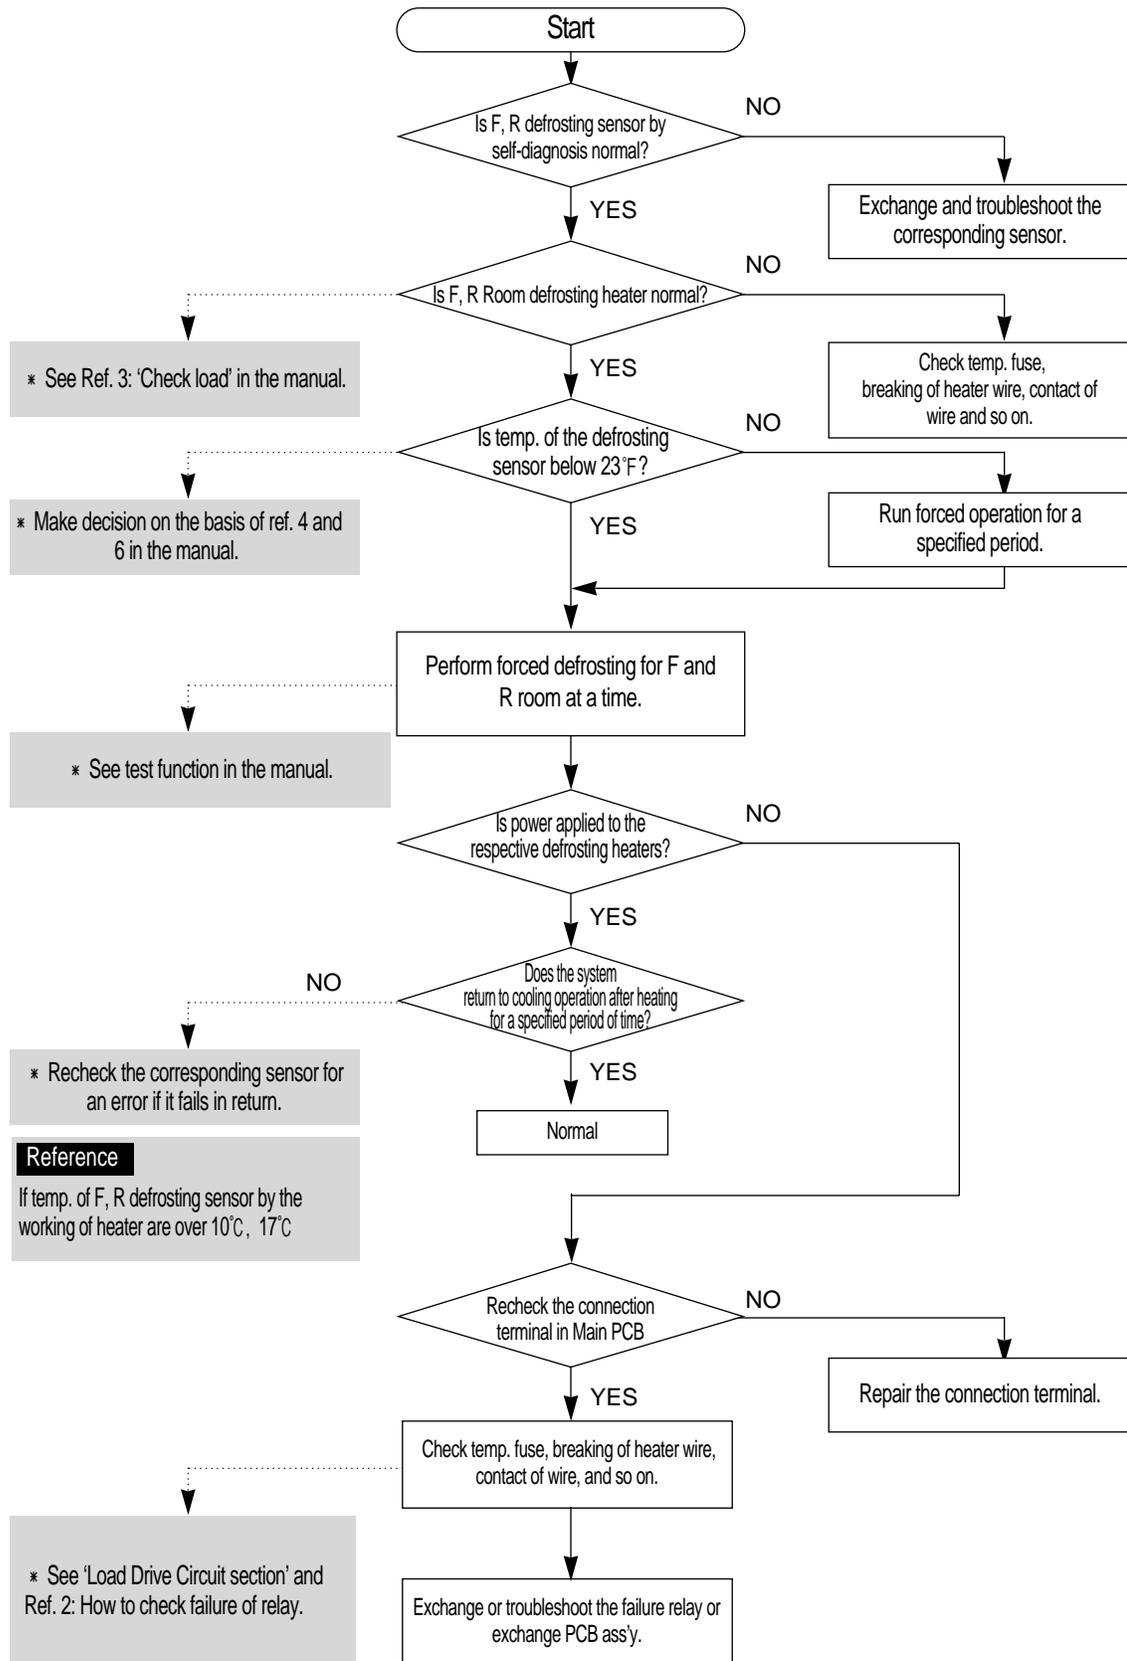

To check the main PCB, please apply descriptions of operation and references in the manual.

## 11-2) If the compressor and cooling fan motor don't work normally

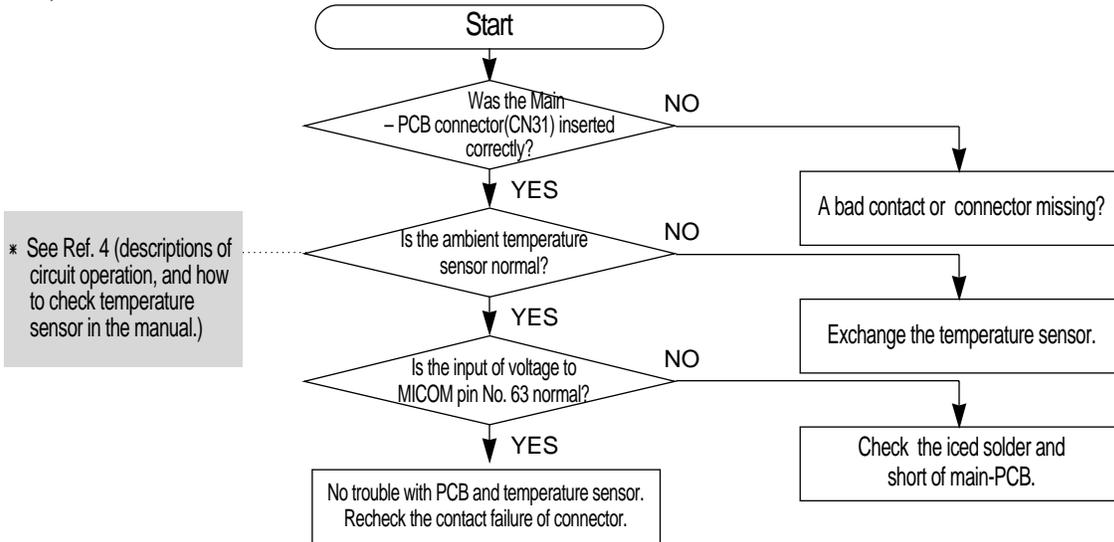

## 11-3) If defrost function

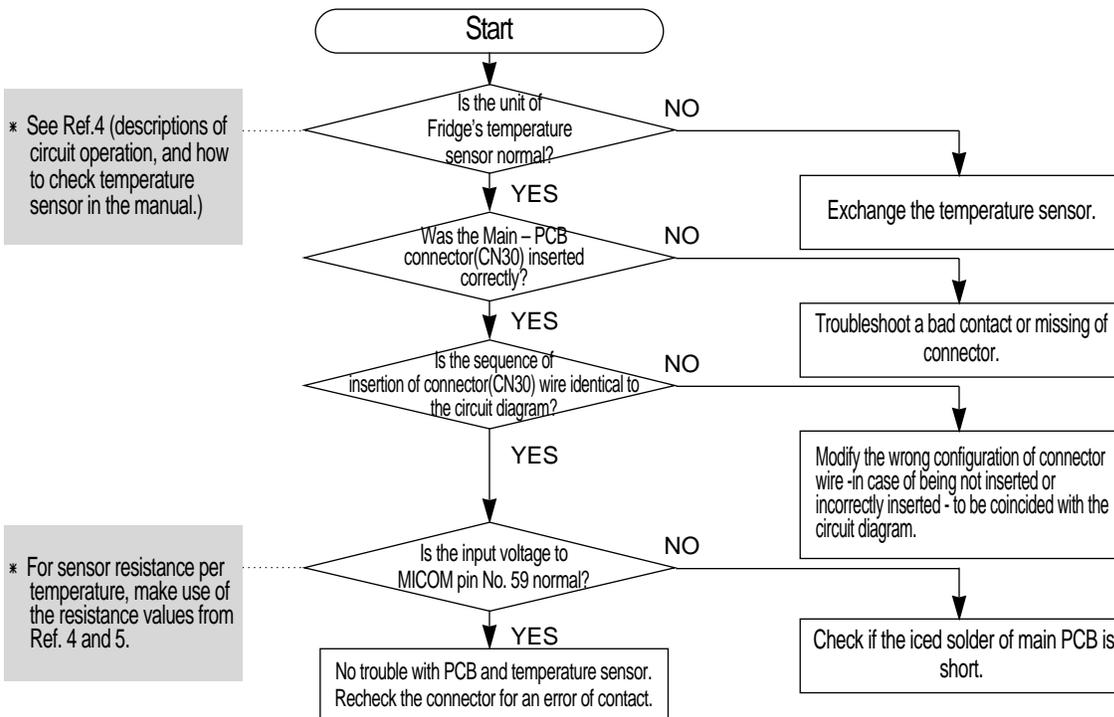

## 11-4) If there is a trouble with self-diagnosis

- Error of sensor can be seen on the front display of refrigerator. If power is impressed to refrigerator first, an failure of sensor is found. The refrigerator will stop working and display(blink) the region of trouble-occurred sensor repetitively.
- Even if sensor has failure during the operation, the refrigerator will not stop working but can run the normal cooling operation because of being operated in the Emergency Operation mode. Therefore you're requested to use how to check self-diagnosis in the manual.

### 1) If the ambient sensor has trouble

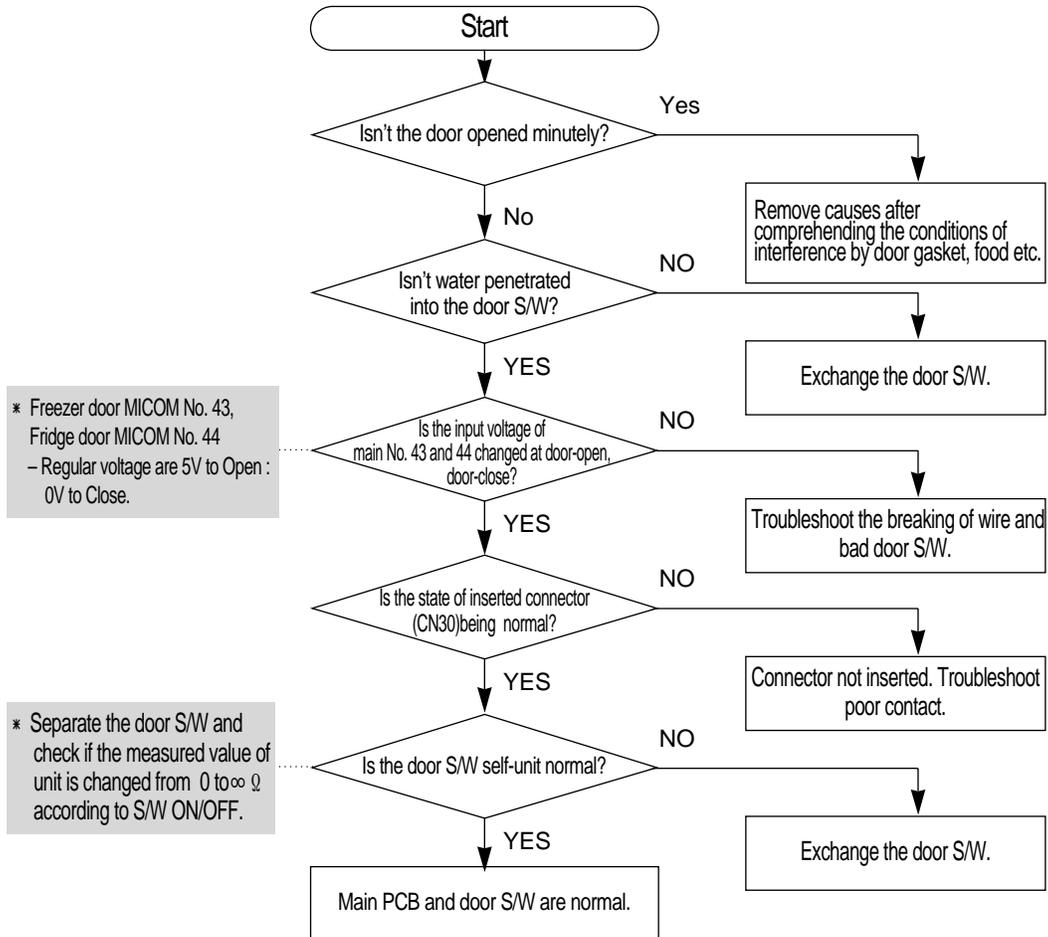

### 2) If the temperature sensor of F and R room has trouble

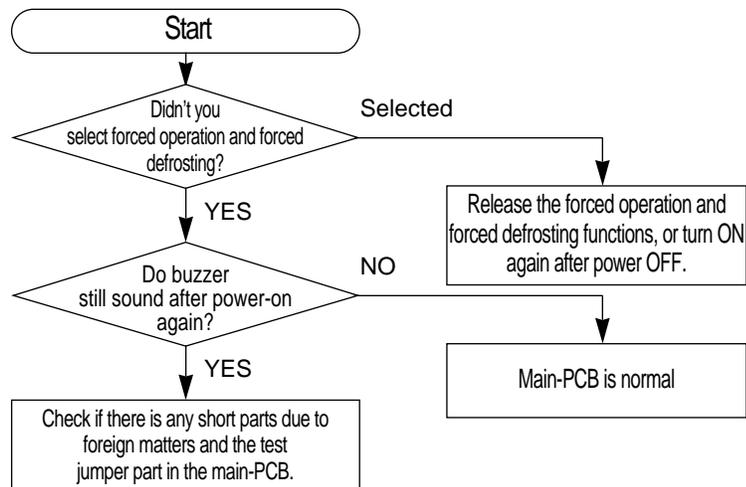

## 11-5) If alarm sound

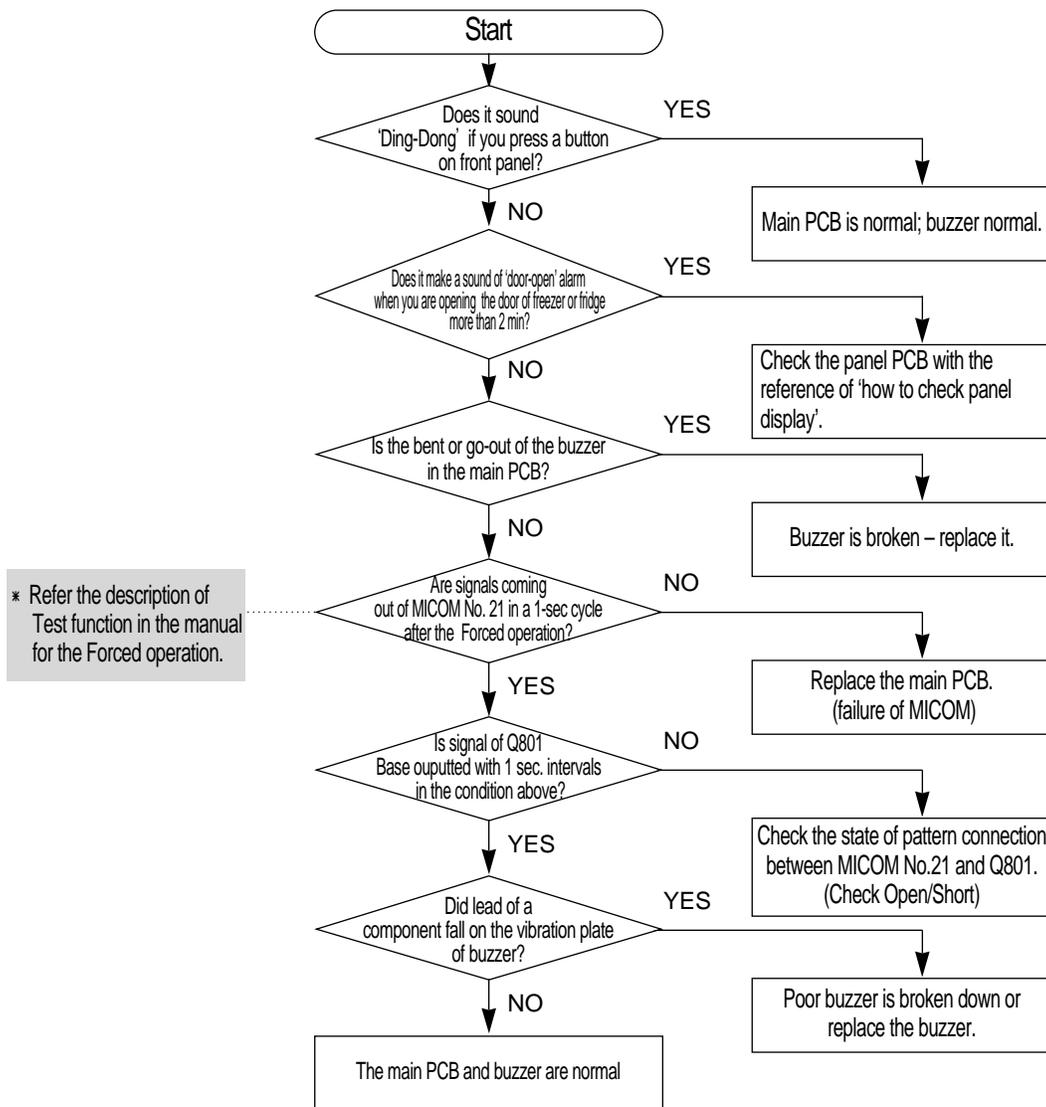

1) If "Ding-Dong" sounds continuously

2) If "Beep" sounds continuously

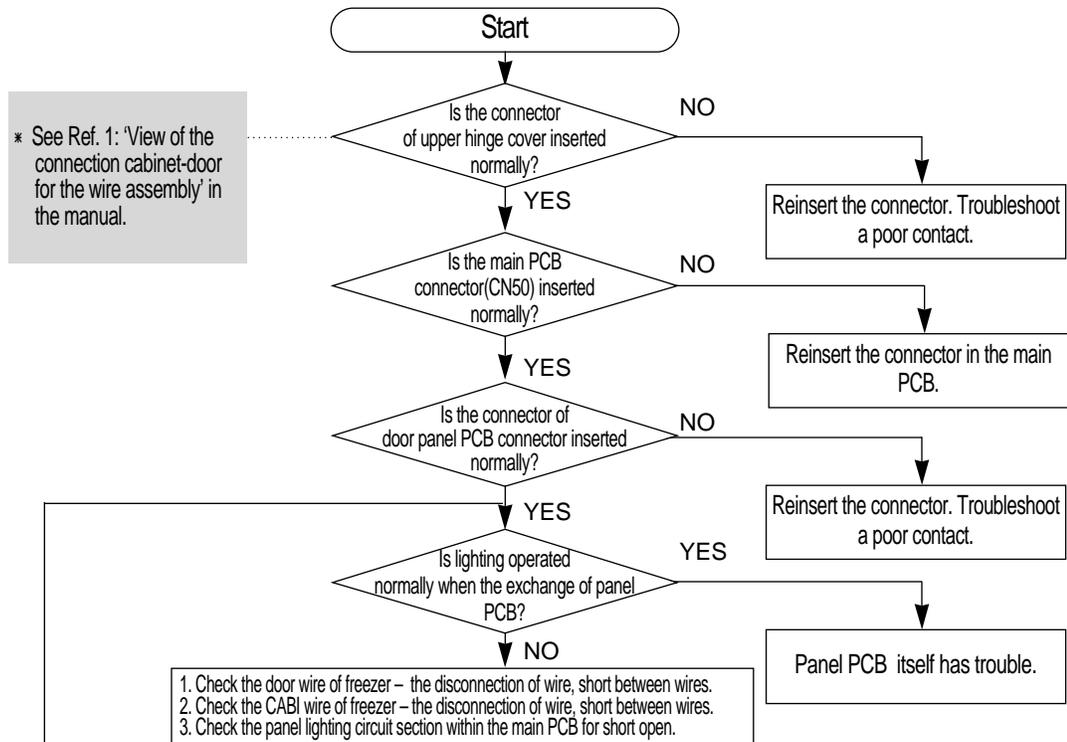

## 3) Without sound of buzzer operation

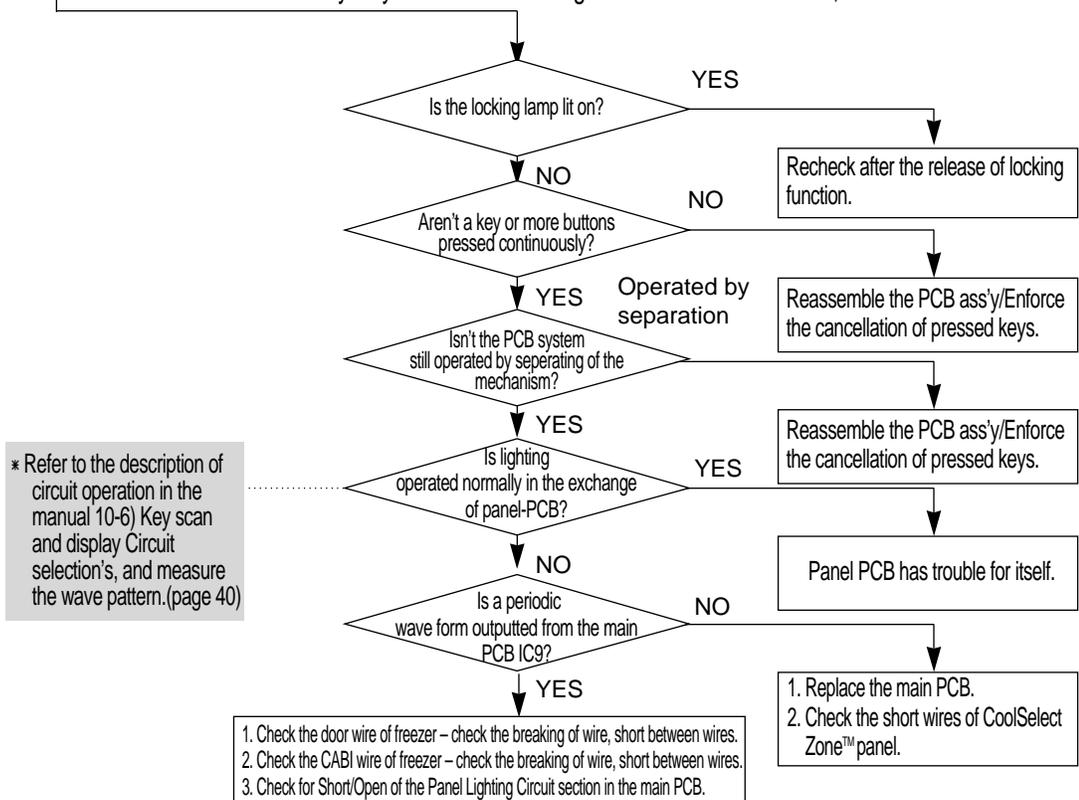

## 11-6) If the panel PCB is not working normally:

1) Where lighting of the panel PCB is disabled, or only some lamps are disabled.

2) Where the Panel PCB key isn't selected:

- The basic check way : If you is troubleshooting in the basic check method, then

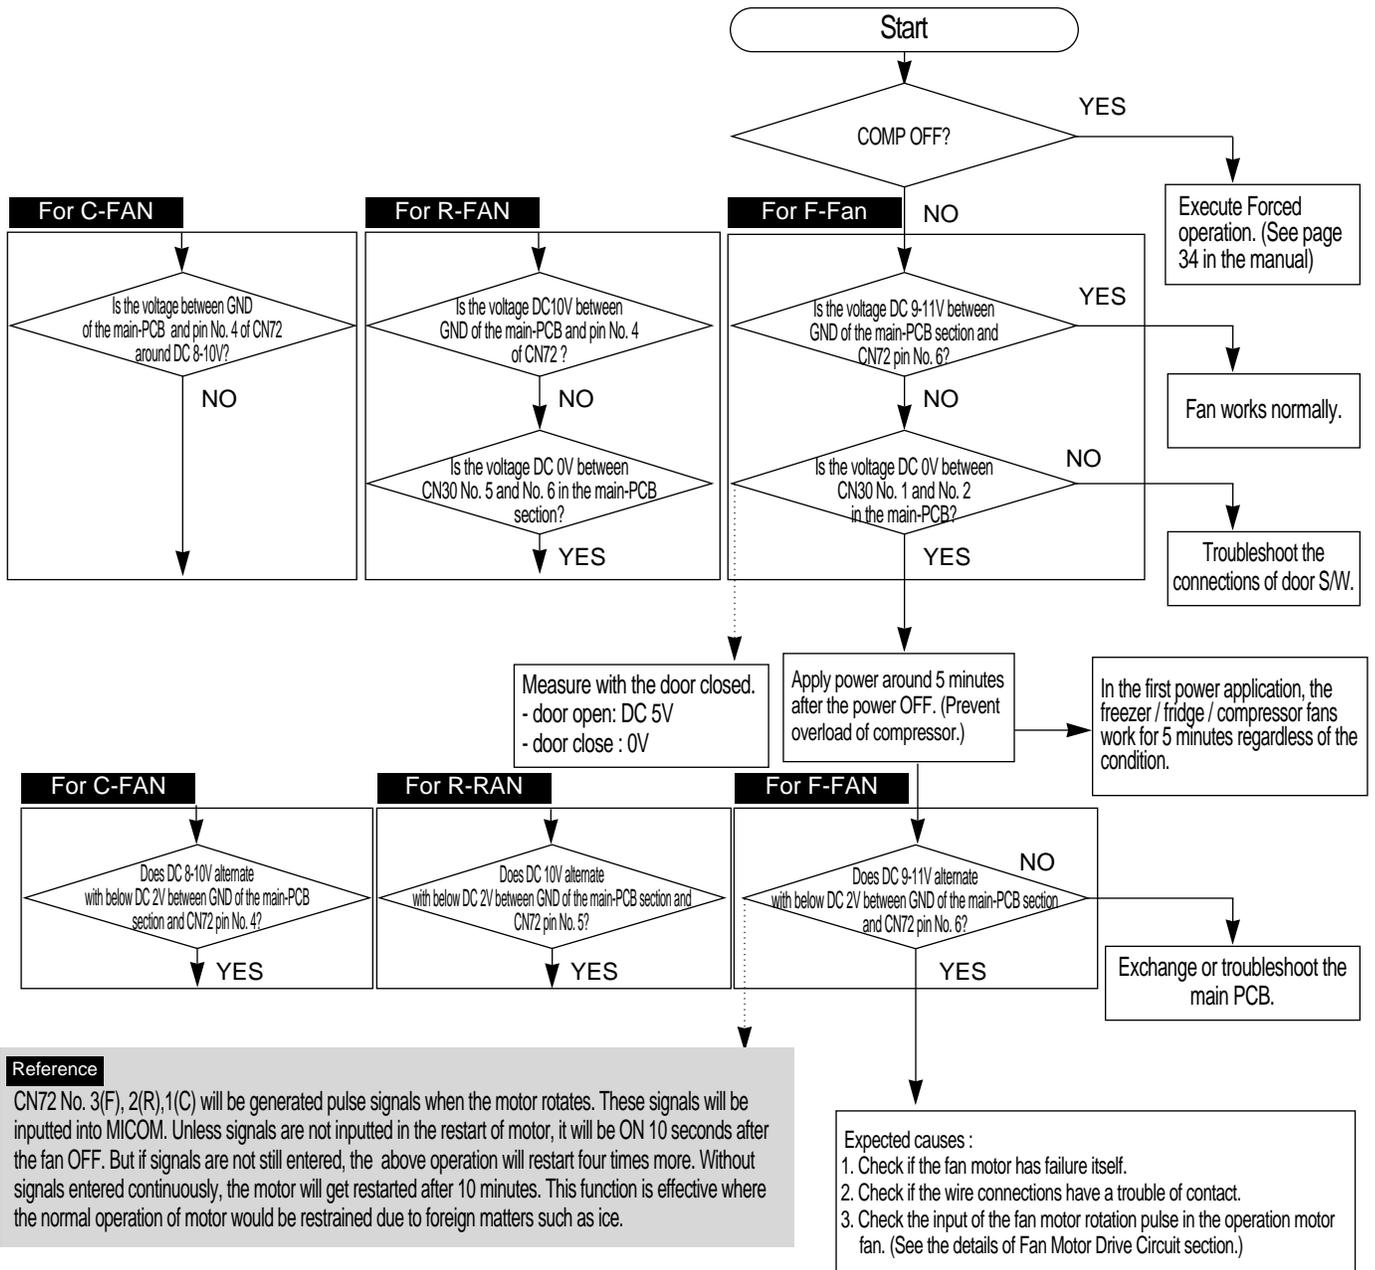

# Diagnostics

## 11-7) If fan doesn't work:

### Reference

- The refrigerator has been applied with the BLDC fan motor. For RS2533, R room Fan is AC motor used. The BLDC motor is driven by DC 8-12V.
- Under the normal condition of COMP ON, it is operated together with F-FAN motor. With operation of the CoolSelect Zone™ function, the F-Fan motor may do not work. If the door is opened and closed once at a high ambient temperature, the BLDC motor would be operated after a 1-minute or longer delay. Therefore, you're advised not to take it for an error.
- When the refrigerator is open, the freezer fan motor will also stop working simultaneously with the fan motor. (for the purpose of performance improvement).

### Reference

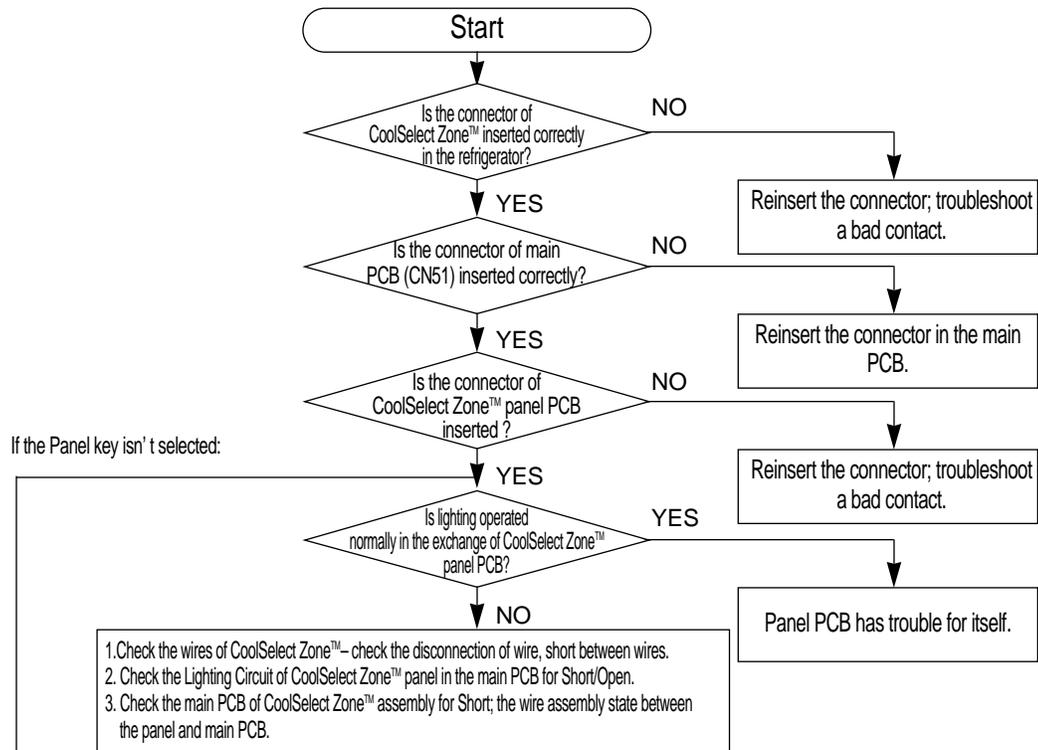

CN72 No. 3(F), 2(R), 1(C) will be generated pulse signals when the motor rotates. These signals will be inputted into MICOM. Unless signals are not inputted in the restart of motor, it will be ON 10 seconds after the fan OFF. But if signals are not still entered, the above operation will restart four times more. Without signals entered continuously, the motor will get restarted after 10 minutes. This function is effective where the normal operation of motor would be restrained due to foreign matters such as ice.

### Expected causes :

1. Check if the fan motor has failure itself.
2. Check if the wire connections have a trouble of contact.
3. Check the input of the fan motor rotation pulse in the operation motor fan. (See the details of Fan Motor Drive Circuit section.)

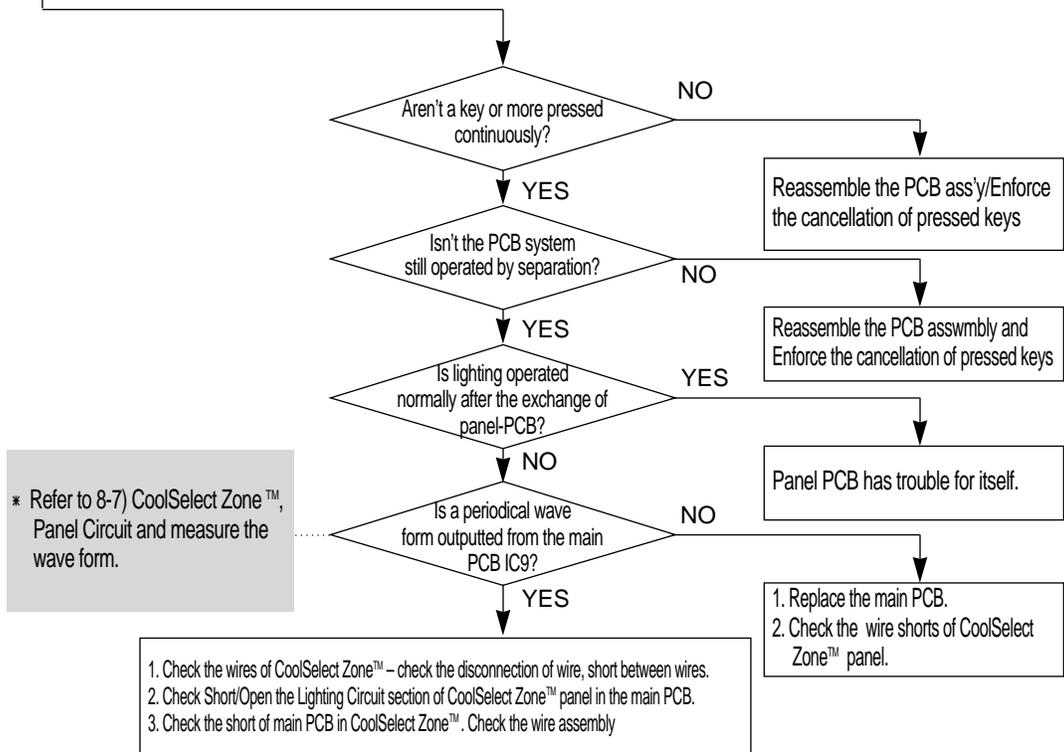

## 11-8) If CoolSelect Zone™ isn't operated normally

1) If the lamp of CoolSelect Zone™ is not lit.

2) If the Panel PCB key isn't selected:

- The basic method is applied to check – if you fail in troubleshooting after above the execution, then

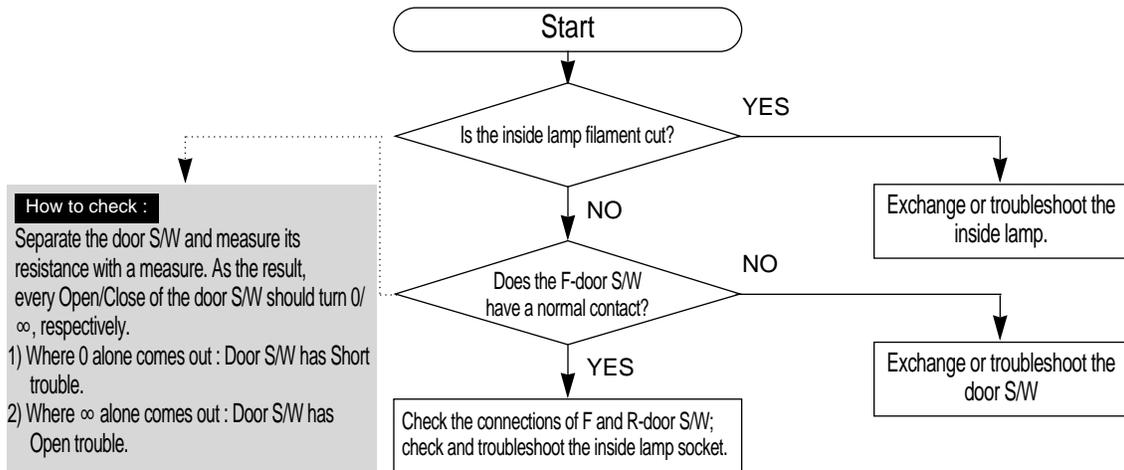

## Diagnosics

### 11-9) If the lamps of freezer / refrigerator does not light.

#### ⚠ Caution!

1. When you are exchanging the lamp of freezer, please exchange or troubleshoot it with the power OFF to avoid an electric shock.
2. Please keep in mind you do not get burnt by the excessive heating of an incandescent light bulb.

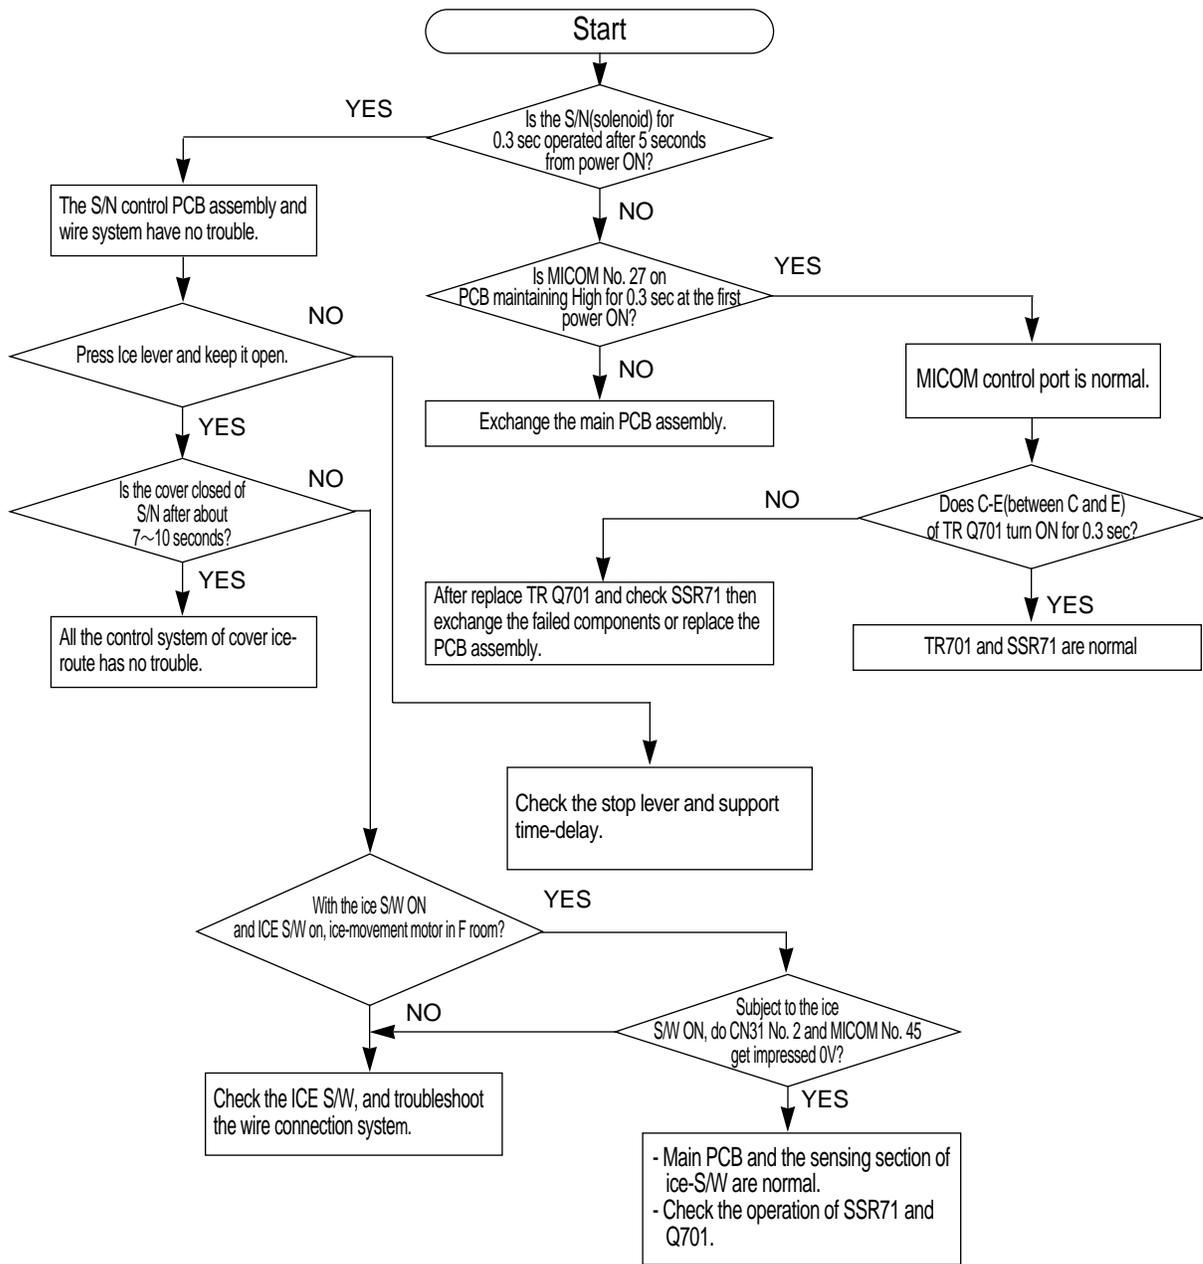

#### Reference

If the door is opened, then the contact of door S/W is opened and MICOM gets applied 5V to finally sense Open. If 5V has been sensed over two minutes afterwards, then an Door-Open alarm will sound 'Ding-Dong' for 10 seconds in a one-minute cycle. For that reason, if the door S/W has failure, the refrigerator can make a "Ding-Dong" sound per a one-minute cycle. Please note step for its service!

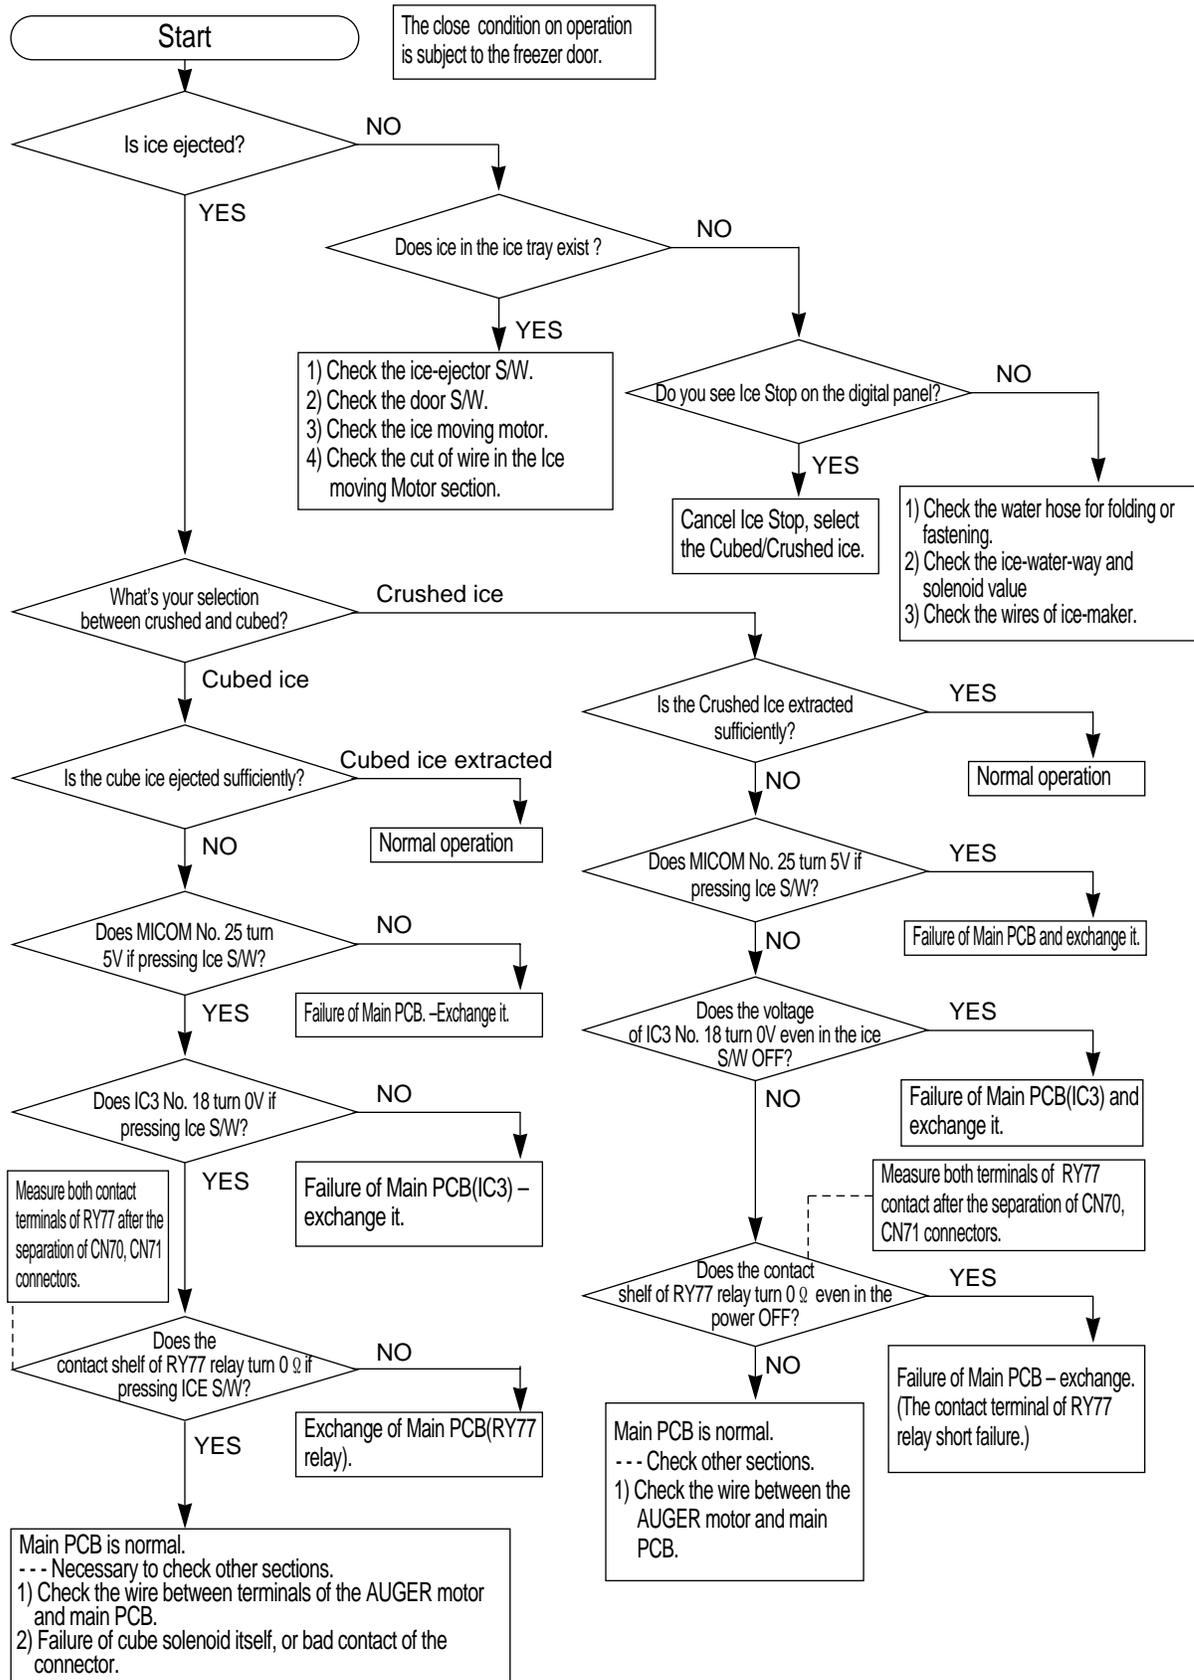

## 11-10) If the solenoid in the ice-chute cover doesn't work :

### Preliminary check

- 1) Check if the solenoid is unconditionally operated for 0.3 sec, independent of the Open/Close condition of cover ice-route, after a lapse of about 5 seconds from power ON. (Before installation, the cancellation of cover ice-route open is enabled.)
- 2) Check if the connector in upper hinge section is hook-up correctly.

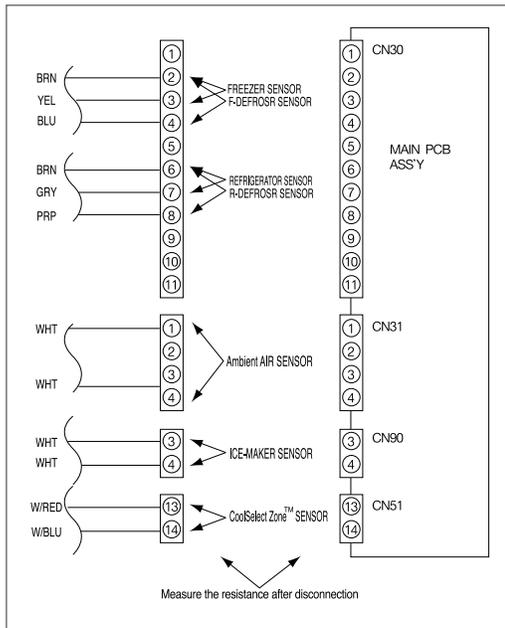

## 11-11) If Crushed Ice/Cubed Ice doesn't work properly:

## Appendix I (Reference for circuit diagnostics)

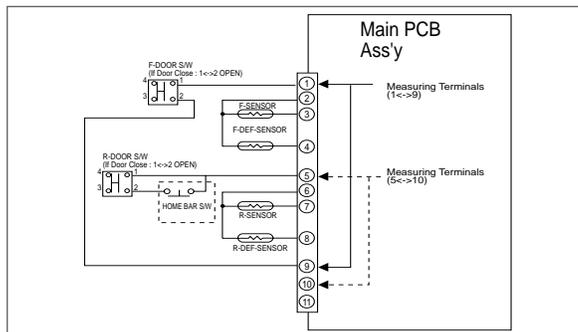

### Ref. 1) Check sensors

Disconnect the connector from the Main PCB, then measure the resistance of the following sensors.

1. Check the resistance the Freezer sensor cn30 between the no. 2 and 3.
  2. Check the resistance the Fridge Room sensor cn30 between the no. 6 and 7.
  3. Check the resistance the F Defrosting sensor cn30 between the no. 2 and 4.
  4. Check the resistance the R Defrosting sensor cn30 between the no. 6 and 8.
  5. Check the resistance between the no. ① and ④ the ambient Air sensor cn31.
  6. Check the resistance between the no. ③ and ④ of the Ice-Maker sensor cn90.
  7. Check the resistance between the no. ⑬ and ⑭ of the CoolSelect Zone™ sensor cn51.
  8. Decide the sensor by comparing above resistances to the temperature of each sensor with the conversion table of sensor resistance and voltage from the reference temperature of Ref. 6 on this manual.
- ※ When the resistance is  $\infty \Omega$  or  $0 \Omega$ , check the connection of electric wire and sensorconnector.

### Ref. 2) Check Door S/W

Check with power applied.

The Door S/W is a two-contact switch. One detects Door Open/Close with DC 5V at the PCB and the other one turns on/off the room light.

#### (R-Room Light)

1. Check if the light comes on by opening the R-Door. If it lights up, check if the light goes off by pressing down the Door S/W with the door open.  
If there is any problem, check the R-Door S/W.

#### (R-Door Open Sensing Part of MAIN PCB)

1. Place the positive(+) terminal on CN30 No.⑤ and the negative(-) on No.⑩. And, check the voltage.
2. When the voltage is DC 5V with the door open, it is normal.
3. When the voltage is DC 0V with the door closed, it is normal. If there is any problem, check the Door S/W and the wire connections.

#### (F-Room Light)

1. Check if the light comes on by opening the F-Door. If it lights up, check if the light goes off by pressing down the Door S/W with the door open.  
If there is any problem, check the F-Door S/W.

#### (F-Door Open Sensing Part of MAIN PCB)

1. Place the positive(+) terminal on CN30 No.① and the negative(-) on No.⑨. And, check the voltage.
2. When the voltage is DC 5V with the door open, it is normal.
3. When the voltage is DC 0V with the door closed, it is normal. If there is any problem, check the Door S/W and the wire connections.

## Appendix I (Reference for circuit diagnostics)

Ref. 3) Table of temperature sensor according to resistance and voltage conversion.

The input voltage to the MICOM PORT could be different by a hardware. This is a table based on the voltage using the 10kohm-F.

MICOM PORT voltage when the sensor is open: about DC 5V(Vcc LEVEL)

MICOM PORT voltage when the sensor is shorted: about DC 0V(Ground LEVEL)

Temp.(°F)	Resistance(kΩ)	Voltage(V)
